UNIT 5 • STANDARD 6.GR.1

Area of Regular Polygons

Lesson 5-4 • Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

TODAY'S OBJECTIVES

Content Objective: I can find the area of a regular polygon by decomposing it into triangles.

Language Objective: I can explain my steps using the words regular polygon, decompose, triangle, and composite.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Regular Polygon

Decompose

Triangle

Composite

Formula

Tap any word to see what it means and a picture.

1 A polygon with all sides and all angles equal is a .

2 To break a shape into smaller shapes is to it.

3 A three-sided polygon is a .

4 Made of two or more shapes combined, a figure is .

5 A math rule written with symbols is a .

Reflect — Exit Ticket

A regular pentagon is decomposed into 5 triangles from its center. Each triangle has a base of 7 inches and a height of 4.8 inches. What is the total area of the pentagon?

- A. 84 sq in
- B. 16.8 sq in
- C. 168 sq in
- D. 84 in

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Regular Polygon
2. **Notes 2:** Decompose
3. **Notes 3:** Triangle
4. **Notes 4:** Composite
5. **Notes 5:** Formula
6. **Watch for this mistake:** *A common mistake in Area of Regular Polygons is skipping the key idea: "A regular polygon splits into the same number of triangles as it has sides, so total area = (one triangle's area) $\times$ (number of sides)." — always check your work against this rule before you submit.*
7. **Try It 1:** A. 60 in^2 — *One triangle = $\frac{1}{2} \times 4 \times 6 = 12 \text{ in}^2$. A pentagon has 5 triangles, so total = $5 \times 12 = 60 \text{ in}^2$.*
8. **Try It 2:** A. 120 sq ft — *An octagon has 8 sides, so it splits into 8 triangles. One triangle = $\frac{1}{2} \times 6 \times 5 = 15 \text{ sq ft}$. Total = $8 \times 15 = 120 \text{ sq ft}$.*
9. **Exit Ticket:** A. 84 sq in — *One triangle: $A = \frac{1}{2} \times 7 \times 4.8 = 16.8 \text{ sq in}$. Total = $5 \times 16.8 = 84 \text{ square inches}$.*
