UNIT 6 • STANDARD 6.AT.6C

Evaluate Expressions

Lesson 6-2 • Teacher Copy

Name: Type your name **Date:** Today's date **Class:** Class period

TODAY'S OBJECTIVES

Content Objective: I can evaluate algebraic expressions by substituting values for the variables.

Language Objective: I can explain my steps using the words variable, expression, evaluate, and substitute.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Tap any word to see what it means and a picture.

1

A letter that stands for an unknown number, like x , is a

2

A group of numbers, variables, and operations with no equal sign is an

3

To find the value of an expression for given values is to

it.

4

To replace a variable with a number is to

5

A number multiplied by a variable, like the 4 in $4y$, is a

6

Terms with the same variable part, like $2x$ and $6x$, are

Reflect — Exit Ticket

Evaluate $5(n - 3) + 2$ when $n = 7$.

- A. 22
- B. 32
- C. 17
- D. 36

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Variable
2. **Notes 2:** Expression
3. **Notes 3:** Evaluate
4. **Notes 4:** Substitute
5. **Notes 5:** Coefficient
6. **Notes 6:** Like terms
7. **Watch for this mistake:** *A common mistake in Evaluate Expressions is skipping the key idea: "Replace the variable with its number, then follow the order of operations to find the total." — always check your work against this rule before you submit.*
8. **Try It 1:** A. 16 — *Substitute $n = 5$: $2(5 + 3)$. Do the parentheses first: $5 + 3 = 8$. Then multiply: $2 \times 8 = 16$.*
9. **Try It 2:** A. 36 — *x^2 means x times itself. Substitute $x = 6$: $6^2 = 6 \times 6 = 36$.*
10. **Exit Ticket:** A. 22 — *$5(7 - 3) + 2 = 5(4) + 2 = 20 + 2 = 22$.*
