UNIT 9 • STANDARD 6.NOS.7

Ordered Pairs in All Four Quadrants

Lesson 9-5 • Teacher Copy

Name: _____ **Date:** _____ **Class:** _____

TODAY'S OBJECTIVES

Content Objective: I can plot ordered pairs in all four quadrants of the coordinate plane.

Language Objective: I can explain my work using the words quadrant, negative coordinate, reflection, and axis.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Quadrant

Negative coordinate

Reflection

Axis

Integer

Tap any word to see what it means and a picture.

- 1 One of the four regions of the coordinate plane, numbered I to IV, is a

- 2 A coordinate less than zero, which places a point left of or below the origin, is a

- 3 A flip of a point over an axis is a

- 4 One of the two number lines, the x-axis or y-axis, that form the grid is an

- 5 A whole number or its opposite is an

Reflect — Exit Ticket

A point has a negative x-coordinate and a negative y-coordinate. Which quadrant is it in?

- A. Quadrant I
- B. Quadrant II
- C. Quadrant III
- D. Quadrant IV

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Quadrant
2. **Notes 2:** Negative coordinate
3. **Notes 3:** Reflection
4. **Notes 4:** Axis
5. **Notes 5:** Integer
6. **Watch for this mistake:** *A common mistake in Ordered Pairs in All Four Quadrants is skipping the key idea: "The signs of (x, y) tell you the quadrant: $(+, +)$ is I, $(-, +)$ is II, $(-, -)$ is III, $(+, -)$ is IV." — always check your work against this rule before you submit.*
7. **Try It 1:** C. Quadrant III — *A negative x means left and a negative y means down, so $(-5, -2)$ is in Quadrant III, where both coordinates are negative.*
8. **Try It 2:** B. $(-, +)$ — *Quadrant II is up and to the left of the origin, so x is negative and y is positive: $(-, +)$.*
9. **Exit Ticket:** C. Quadrant III — *Quadrant III is where both x and y are negative. This means the point is left of the origin and below the origin.*
