UNIT 2 • STANDARD 6.NS.1

Fraction Division Problem Solving

Lesson 2-5 • Teacher Copy

Name: Type your name

Date: Today's date

Class: Class period

Key Vocabulary

Level 2 Standard

Picture first, then the word, then a plain-language meaning. Say each word out loud.

A bar model showing $3/4$ split into $1/8$ -size pieces, or the equation $3/4 \div 1/8 = 6$

Model

Write the definition:

$$x + 2 = 7$$

balanced with =

$3/4 \div 1/8 = 6$ — the left side (division) equals the right side (answer)

Equation

Write the definition:

$$x + 2 = 7$$

balanced with =

In $3/4 \div 1/8 = 6$, the solution is 6 portions

Solution

Write the definition:

247

hundreds tens ones

$3 \div 1/4 = 12$. Is 12 reasonable? Yes, because $1/4$ is small so many pieces fit into 3.

Reasonableness

Write the definition:

$$x + 2 = 7$$

balanced with =

If $3/4 \div 1/8 = 6$, then $6 \times 1/8 = 6/8 = 3/4$.

Multiplication checks division.

Inverse operations

Write the definition:

Guided Notes

WHAT WE'RE LEARNING TODAY

I can solve real-world problems by writing and solving fraction division equations.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Model

Equation

Solution

Reasonableness

Inverse operations

Tap any word to see what it means and a picture.

1

A drawing or diagram that shows a math situation is a .

2

A math sentence that says two amounts are equal, with an = sign, is an

.

3

The value that makes an equation true is the .

4

Checking whether an answer makes sense for the problem is checking its

.

5

Operations that undo each other, like multiplication and division, are

.

Watch & Try — Worked Examples

See the notes in action: watch one worked all the way through, then try the next with the same steps.

 I do — watch

Follow each step as your teacher solves it.

Problem: A ribbon is $\frac{4}{5}$ of a yard long. Each bow uses $\frac{1}{10}$ of a yard. Which equation finds how many bows can be made?

- A. $\frac{4}{5} \div \frac{1}{10}$
- B. $\frac{1}{10} \div \frac{4}{5}$
- C. $\frac{4}{5} \times \frac{1}{10}$
- D. $\frac{4}{5} + \frac{1}{10}$

Step 1 The total ($\frac{4}{5}$ yard) is divided into groups of $\frac{1}{10}$ yard each.

Step 2 The equation is $\frac{4}{5} \div \frac{1}{10} = \frac{4}{5} \times \frac{10}{1} = \frac{40}{5} = 8$ bows.

 **Answer:** A. $\frac{4}{5} \div \frac{1}{10}$

 Try — put the steps in order

Drag the cards (or use the ▲ ▼ buttons) to put the solution steps in the right order, then press **Check**.

The equation is $\frac{4}{5} \div \frac{1}{10} = \frac{4}{5} \times \frac{10}{1} = \frac{40}{5} = 8$ bows.

The total ($\frac{4}{5}$ yard) is divided into groups of $\frac{1}{10}$ yard each.

 We do — together

Solve this one with your class using the same steps.

Problem: A detective has $\frac{1}{2}$ gallon of solution. Each test uses $\frac{1}{8}$ gallon. How many tests can be run?

- A. 4
- B. $\frac{1}{16}$
- C. 16
- D. $\frac{1}{4}$

Step 1 _____

Step 2 _____

Answer: _____

 You do — your turn

Now try one on your own. Show every step.

Problem: A trail is $\frac{3}{4}$ mile long. A jogger runs laps of $\frac{1}{4}$ mile each. How many laps does the jogger complete?

- A. 3 laps
- B. $\frac{1}{3}$ lap
- C. 4 laps
- D. $\frac{3}{16}$ lap

Show your work:

Try It

Solve on your own. Check the answer key when you are done.

1. Room 2 — Surveillance Map: A suspect's trail is $\frac{5}{6}$ of a mile. Hidden checkpoints are spaced every $\frac{1}{6}$ of a mile. How many checkpoints are on the trail?

- A. 5
- B. 6
- C. $\frac{1}{5}$
- D. 4

Show your work:

2. Room 5 — Final Keypad: The vault key code equals the number of $\frac{3}{10}$ -liter vials Torres can fill from a $\frac{9}{10}$ -liter bottle of fingerprint solution. What is the code?

- A. 3
- B. 9
- C. $\frac{1}{3}$
- D. 6

Show your work:

Stretch Your Thinking

Level 2 enrichment

Challenge task — explain your reasoning in full sentences.

Write your own fraction division word problem where the answer is 8. Then show the equation, solve it step by step, and explain how you know your answer is reasonable.

Sentence starter: My word problem: _____. The equation is $\frac{\quad}{\quad} \div \frac{\quad}{\quad} = \frac{\quad}{\quad}$. I solved it using KCF: $\frac{\quad}{\quad} \times \frac{\quad}{\quad} = \frac{\quad}{\quad}$. The answer 8 is reasonable because _____.

Show your work:

Reflect — Exit Ticket

A pipe is $\frac{3}{4}$ meter long. Each connector piece is $\frac{3}{8}$ meter. How many connectors fit on the pipe?

- A. 2
- B. $\frac{9}{32}$
- C. $\frac{3}{2}$
- D. 6

Your answer:

Answer Key & Teacher Guide

1. **Notes 1:** Model
2. **Notes 2:** Equation
3. **Notes 3:** Solution
4. **Notes 4:** Reasonableness
5. **Notes 5:** Inverse operations
6. **We Try (notes):** A. $4 - 1/2 \div 1/8 = 1/2 \times 8/1 = 8/2 = 4$ tests.
7. **You Try (notes):** A. 3 laps — $3/4 \div 1/4 = 3/4 \times 4/1 = 12/4 = 3$ laps. *This is reasonable: three 1/4-mile pieces fit into 3/4 mile.*
8. **Try It 1:** A. 5 — *The total distance (5/6 mile) is the dividend and the checkpoint spacing (1/6 mile) is the divisor: $5/6 \div 1/6 = 5/6 \times 6/1 = 30/6 = 5$ checkpoints.*
9. **Try It 2:** A. 3 — *The total (9/10 liter) is the dividend and each vial (3/10 liter) is the divisor: $9/10 \div 3/10 = 9/10 \times 10/3 = 90/30 = 3$ vials, so the code is 3.*
10. **Exit Ticket:** A. 2 — $3/4 \div 3/8 = 3/4 \times 8/3 = 24/12 = 2$. *Two connector pieces fit on the pipe.*
