UNIT 3 • STANDARD 6.AT.3

Compare Ratio Relationships

Lesson 3-5 • Teacher Copy

Name: _____

Date: _____

Class: _____

My Notes

Level 3 Enrichment

TODAY'S OBJECTIVES

Content Objective: I can compare ratios by finding unit rates or using equivalent ratios.

Language Objective: I can explain my comparison using the words unit rate, equivalent ratio, compare, and common denominator.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Compare Ratios

Unit rate

Equivalent ratio

Compare

Simplify

Common denominator

Tap any word to see what it means and a picture.

Level 3: try the blanks from memory first, then check the bank.

1

— Decide which ratio is greater, less, or equal by using equivalent ratios or unit rates.

2

A rate that tells the amount for exactly one unit, like 5 miles per 1 hour, is a

3

— Two ratios that mean the same thing.

4

To decide which ratio is greater or if they are equal is to

them.

5

Writing a ratio in its smallest equal form is to it.

- 6 A denominator shared by two fractions so they can be compared is a

Write About the Math

Guided ESOL writing

Use the support level you need. Every level answers the same math question.

1. Understand the Question

EXPLAIN

Two pizza shops are running deals. Mario's Pizza sells 2 large pizzas for \$18. Sal's Pizza sells 3 large pizzas for \$25. A school needs to buy pizza for a class party and wants to get the best deal per pizza?

Your job: Answer the question. Use math evidence. Explain how the evidence proves your answer.

Responde la pregunta. Usa evidencia matemática. Explica cómo la evidencia demuestra tu respuesta.

2. Plan Your Math Words

Check at least two words you will use.

- ☐ **Compare Ratios** — Decide which ratio is greater, less, or equal by using equivalent ratios or unit rates.
Comparar razones — Decidir cuál razón es mayor, menor o igual usando razones equivalentes o tasas unitarias.

- ☐ **Unit rate** — A rate for just 1 of something, like cost for 1 item.
Tasa unitaria — Una tasa para solo 1 de algo, como el precio de 1 artículo.

- ☐ **Equivalent ratio** — Two ratios that mean the same thing.
Razón equivalente — Dos razones que significan lo mismo.

- ☐ **Compare** — To look at ratios and see which is bigger, smaller, or equal.
Comparar — Mirar razones para ver cuál es mayor, menor o igual.

- ☐ **Simplify** — To make a ratio as small as possible while keeping the same comparison.
Simplificar — Hacer una razón lo más pequeña posible sin cambiar la comparación.

Say it first: Say your idea to a partner or quietly to yourself before you write.

Di tu idea a un compañero o en voz baja antes de escribir.

Mario's costs ____ per pizza and Sal's costs about ____ per pizza, so the better deal is ____.

Di tu respuesta primero: Mi respuesta es ____ porque ____.

3. Build Your Explanation

Model the parts: This model shows the parts of an explanation. It does not answer your writing question.

Claim: You can't compare fairly until the ratios share the same amount of milk or you find cocoa per 1 oz.

Evidence: Students recognize that 3:5 and 4:7 have different milk amounts, so a fair comparison needs equal milk (a common amount) or a unit rate (cocoa per 1 oz).

Reasoning: This evidence connects the definition of compare to the mathematical claim.

Start

Most language support

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **Mario's costs** ____ **per pizza** and **Sal's costs** about ____ **per pizza**, so the better deal is ____.
 - **My answer is** ____.
- Mi respuesta es* ____.

Build

Some language support

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is** ____.
- Mi afirmación es* ____.
- **I know because** ____.
- Lo sé porque* ____.
- **So** ____.
- Entonces* ____.

Explain

Light language support

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- **My claim is ____.**
Mi afirmación es ____.
- **My math evidence is ____.**
Mi evidencia matemática es ____.
- **This proves ____ because ____.**
Esto demuestra ____ porque ____.

4. Check Your Explanation

- ☐ I answered the question.
Respondí la pregunta.
- ☐ I used math evidence: numbers, an equation, a model, or a comparison.
Usé evidencia matemática: números, una ecuación, un modelo o una comparación.
- ☐ I explained how the evidence proves my answer.
Explicué cómo la evidencia demuestra mi respuesta.
- ☐ I used at least two math words.
Usé por lo menos dos palabras matemáticas.
- ☐ I reread complete sentences and punctuation.
Volví a leer mis oraciones completas y la puntuación.

Writing Guide — Teacher Copy

The support level changes the amount of language scaffolding, not the mathematical expectation. Look for the same five features in every response.

- I answered the question.
- I used math evidence: numbers, an equation, a model, or a comparison.
- I explained how the evidence proves my answer.
- I used at least two math words.
- I reread complete sentences and punctuation.

Answer Key & Teacher Guide

1. **Notes 1:** Compare Ratios
2. **Notes 2:** Unit rate
3. **Notes 3:** Equivalent ratio
4. **Notes 4:** Compare
5. **Notes 5:** Simplify
6. **Notes 6:** Common denominator
7. **Watch for this mistake:** *A common mistake in Compare Ratios is thinking the ratio with the bigger raw number automatically wins — like assuming Chef Tran's 8 tablespoons of cocoa must be more chocolatey than Chef Reyes's 6 tablespoons, without checking that the milk amounts (14 oz vs. 10 oz) are different. Never compare the raw numbers alone — always scale both ratios to the same amount or find each unit rate first.*
8. **Try It 1:** B. Recipe A — *Recipe A: $4 / 10 = 0.4$ tsp per cup. Recipe B: $3 / 8 = 0.375$ tsp per cup. Since $0.4 > 0.375$, Recipe A is saltier per cup.*
9. **Try It 2:** A. Chef Mara — *Chef Mara: $6 / 9 = 0.666...$ oz per cupcake. Chef Devi: $4 / 7 = 0.571...$ oz per cupcake. Since $0.67 > 0.57$, Chef Mara's glaze has more lemon per cupcake.*
