

Distribution Shape Gallery

Unit 8: Sports Analytics Lab • Lesson 8-7 • EduWonderLab

UNIT 8 • LESSON 8-7 • TEACHER NOTES

Standard 6.SP.2

FORMAT Gallery walk + label	TIME 25–30 min
GROUPING Small groups rotating	TOPIC Shape of Data Distributions
STANDARD 6.SP.2	PREP LEVEL Light — print display cards and response sheet

Learning goal *I can describe the shape of a distribution as symmetric, skewed, clustered, or having gaps.*

Teacher setup

- Post display cards around the room. Groups rotate to each display.
- Students label the shape and give evidence for it.
- Use the word bank for shape vocabulary.

Materials

Display cards (dot plots, histograms, box plots), Gallery response sheet, Vocabulary word bank, Pencil.

Differentiation & language support

- Word bank: symmetric, skewed, clustered, gap (SPED).
- Sentence stem: “The distribution is ___ because I notice ___.”
- ESOL: pair each shape word with a quick sketch.

Key vocabulary (English / Español):

Term	Español	What it means
symmetric	simétrico	balanced on both sides
skewed	sesgado	stretched toward one side
cluster	agrupación	values grouped together

Quick teacher check: *Check that students cite evidence, not just a label.*

Distribution Shape Gallery

Unit 8: Sports Analytics Lab · Lesson 8-7 · EduWonderLab

Name: _____

Date: _____

Class: _____

Your goal: *I can describe the shape of a distribution as symmetric, skewed, clustered, or having gaps.*

What you need

Display cards, Gallery response sheet, Word bank.

How to play

1. Go to a display and look at its overall shape.
2. Decide: symmetric, skewed, clustered, or with a gap.
3. Write the shape and the evidence you see.
4. Rotate to the next display.

Display Cards

Describe each display's shape using evidence: symmetric, skewed, clustered, or with gaps.

1. A dot plot piled evenly in the middle.	2. Most data on the left with a long tail to the right.
3. Most data on the right with a tail to the left.	4. Two groups of data with a gap between them.
5. A bell-shaped histogram.	6. Values bunched at the high end.
7. Even spread with one value far away.	8. A box plot with a centered median and equal whiskers.

Gallery response sheet (shape + evidence):

Explain your thinking

Explain how the shape of a distribution helps you choose a measure of center.

Sentence frame: *The distribution is ___ because I notice ___.*

★ **Challenge:** *For a skewed-right distribution, would the mean or median be larger? Explain.*

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 8 • LESSON 8-7 • Distribution Shape Gallery

Standard 6.SP.2

Answers

1. A dot plot piled evenly in the middle. Answer: Symmetric — balanced on both sides	2. Most data on the left with a long tail to the right. Answer: Skewed right
3. Most data on the right with a tail to the left. Answer: Skewed left	4. Two groups of data with a gap between them. Answer: Clustered with a gap
5. A bell-shaped histogram. Answer: Symmetric	6. Values bunched at the high end. Answer: Skewed left
7. Even spread with one value far away. Answer: Has a gap / outlier	8. A box plot with a centered median and equal whiskers. Answer: Symmetric

Teaching notes & look-fors

- Symmetric: 1, 5, 8. Skewed: 2 (right), 3 and 6 (left). Gap/cluster: 4, 7.
- Challenge: in a right-skewed set, the mean is usually larger than the median.
