UNIT 3 • STANDARD 6.AT.2

## Solve Problems with Unit Rates

Lesson 3-8 • Teacher Copy

**Name:** \_\_\_\_\_

**Date:** \_\_\_\_\_

**Class:** \_\_\_\_\_

## My Notes

Level 1 Support

### TODAY'S OBJECTIVES

**Content Objective:** I can solve real-world problems by using unit rates to compare options.

**Language Objective:** I can explain my comparison using the words unit rate, better buy, per unit, and rate.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

**Fill in each blank as we go. Use the Word Bank to help you.**

### WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Unit Rate Problem Solving

Unit Rate

Better Buy

Comparison

Per Unit

Rate

Proportion

Tap any word to see what it means and a picture.

1

— Find an amount per 1 unit and use it to compare choices or solve a problem.

2

A rate that gives the amount for exactly one unit is a

3

The option that costs less per item, found by comparing unit rates, is the

4

Showing how two amounts relate to each other is a

5

The cost or amount for a single item is the cost

- 6 A ratio comparing two quantities with different units is a

- 7 An equation stating that two ratios are equal is a .

## Write About the Math

Guided ESOL writing

Use the support level you need. Every level answers the same math question.

### 1. Understand the Question

EXPLAIN

**Which printer should the manager choose, and how long will it take to print all 600 tickets?**

**Your job:** Answer the question. Use math evidence. Explain how the evidence proves your answer.

*Responde la pregunta. Usa evidencia matemática. Explica cómo la evidencia demuestra tu respuesta.*

## 2. Plan Your Math Words

Check at least two words you will use.

☐ **Unit Rate Problem Solving** — Find an amount per 1 unit and use it to compare choices or solve a problem.  
*Resolución de problemas con tasas unitarias — Hallar una cantidad por 1 unidad y usarla para comparar opciones o resolver un problema.*

☐ **Unit Rate** — A rate for just 1 of something, like cost for 1 item.  
*Tasa unitaria — Una tasa para solo 1 de algo, como el precio de 1 artículo.*

☐ **Better Buy** — The choice that costs less for each item.  
*Mejor compra — La opción que cuesta menos por cada artículo.*

☐ **Comparison** — Looking at two or more amounts to see how they are related.  
*Comparación — Mirar dos o más cantidades para ver cómo se relacionan.*

☐ **Per Unit** — For each single item.  
*Por unidad — Por cada artículo.*

**Say it first:** Say your idea to a partner or quietly to yourself before you write.

*Di tu idea a un compañero o en voz baja antes de escribir.*

**Printer A prints \_\_\_\_ tickets per minute. Printer B prints \_\_\_\_ tickets per minute. The manager should use Printer \_\_\_\_ because it is faster. It will take \_\_\_\_ minutes to print 600 tickets.**

*Di tu respuesta primero: Mi respuesta es \_\_\_\_ porque \_\_\_\_.*

### 3. Build Your Explanation

**Model the parts:** This model shows the parts of an explanation. It does not answer your writing question.

**Claim:** Finding the cost per one token lets me compare deals fairly even when the package sizes differ.

**Evidence:** Students explain the packages have different quantities, so the per-unit cost (unit rate) is needed to compare deals fairly.

**Reasoning:** This evidence connects the definition of unit rate to the mathematical claim.

#### Start

Most language support

Complete the frames. Use the word bank.

*Completa las oraciones. Usa el banco de palabras.*

- **Printer A prints \_\_\_\_ tickets per minute. Printer B prints \_\_\_\_ tickets per minute. The manager should use Printer \_\_\_\_ because it is faster. It will take \_\_\_\_ minutes to print 600 tickets.**

- **My answer is \_\_\_\_.**

*Mi respuesta es \_\_\_\_.*

---

---

---

#### Build

Some language support

Write two connected sentences. Use because, so, or but.

*Escribe dos oraciones conectadas. Usa porque, entonces o pero.*

- **My claim is \_\_\_\_.**

*Mi afirmación es \_\_\_\_.*

- **I know because \_\_\_\_.**

*Lo sé porque \_\_\_\_.*

- **So \_\_\_\_.**

*Entonces \_\_\_\_.*

---

---

## Explain

### Light language support

Write a claim, give math evidence, and explain your reasoning.

*Escribe una afirmación, da evidencia matemática y explica tu razonamiento.*

- **My claim is \_\_\_\_.**  
*Mi afirmación es \_\_\_\_.*
  - **My math evidence is \_\_\_\_.**  
*Mi evidencia matemática es \_\_\_\_.*
  - **This proves \_\_\_\_ because \_\_\_\_.**  
*Esto demuestra \_\_\_\_ porque \_\_\_\_.*
- 
- 
- 

## 4. Check Your Explanation

- ☐ I answered the question.  
*Respondí la pregunta.*
- ☐ I used math evidence: numbers, an equation, a model, or a comparison.  
*Usé evidencia matemática: números, una ecuación, un modelo o una comparación.*
- ☐ I explained how the evidence proves my answer.  
*Explicué cómo la evidencia demuestra mi respuesta.*
- ☐ I used at least two math words.  
*Usé por lo menos dos palabras matemáticas.*
- ☐ I reread complete sentences and punctuation.  
*Volví a leer mis oraciones completas y la puntuación.*

---

## Writing Guide — Teacher Copy

The support level changes the amount of language scaffolding, not the mathematical expectation. Look for the same five features in every response.

- I answered the question.
- I used math evidence: numbers, an equation, a model, or a comparison.
- I explained how the evidence proves my answer.
- I used at least two math words.
- I reread complete sentences and punctuation.

---

## Answer Key & Teacher Guide

1. **Notes 1:** Unit Rate Problem Solving
2. **Notes 2:** Unit Rate
3. **Notes 3:** Better Buy
4. **Notes 4:** Comparison
5. **Notes 5:** Per Unit
6. **Notes 6:** Rate
7. **Notes 7:** Proportion
8. **Watch for this mistake:** *A common mistake in Solve Problems with Unit Rates is comparing the total prices instead of the cost per item — the deal with the smaller total can still cost more per unit. Always reduce each option to its unit rate before you decide, then pick the lower one.*
9. **Try It 1:** A. 50 miles per hour —  $150 \div 3 = 50$  miles per hour.
10. **Try It 2:** A. 15 tickets for \$3.00 — \$0.20 each — 8 for \$2.00:  $\$2.00 \div 8 = \$0.25$  each. 15 for \$3.00:  $\$3.00 \div 15 = \$0.20$  each.  $\$0.20 < \$0.25$ , so 15 for \$3.00 is cheaper per ticket.
