LESSON 1.1

Math is Mine

Set B · Version A · Second form · supported practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe the ways we are all doers of math, and compare my math story with a classmate's.

WHY THIS MATTERS You have been doing math your whole life — at home, in school, and in your neighborhood — often without calling it math. This year starts by naming what you already do. Today you will take a Strengths Inventory — naming one thing you can already do well and one area you want to grow — and you will write your own math story. Then you will read a classmate's story and find one thing that is the same as yours and one thing that is different. Estimating the riders on that Ferris wheel is math. So is deciding whether an answer is reasonable.

REMEMBER

Math is Mine

Math Practices: Mindset & Problem Solving Before any new mathematics, the book asks a different question: where does math already live in your day?

1. Make sense of the problem and persevere in solving it.
2. Look for entry points and decompose complex tasks into manageable parts.
3. Use estimation and mental math to check for reasonableness

Words: doer of math *(persona que hace matemáticas)* · math story *(historia matemática)* · strength *(fortaleza)* · decompose *(descomponer)* · estimate *(estimar)*

PART 1 Understand the idea

models and meaning

1 **Write the name of the correct group on each line.**

Sort each thought by the kind of thinking it shows.

Groups: Doer-of-math thinking · Stuck thinking

_____ I can't do this... yet.

_____ Mistakes give my brain information.

_____ Let me look for a different entry point.

_____ An estimate first will help me check my answer.

_____ I'm just not a math person.

_____ If it's hard, I should quit.

_____ There is only one right way to solve it.

_____ Being fast is the same as being smart.

HINT Doer-of-math thoughts leave a next step open: try, estimate, look again.

2 **Complete the table. Show how you found each value.**

Use mental math to complete each Ferris wheel estimate.

Situation	Estimate	Answer
20 cars, each holding about 4 riders		
About 80 riders each turn, 6 turns in an hour		
About 480 riders each hour, for 2 hours		

HINT Each row builds on the row before it — use your last answer as the next start.

SHOW YOUR WORK

3 **Circle the letter of the best answer. Show how you know.**

Which expression shows 4 groups of 5 students?

(A) 4 × 5

(B) 4 + 5

(C) 5 − 4

(D) 5 ÷ 4

SHOW YOUR WORK

PART 2 Practice the skill

show every step

4 **Circle the letter of the best answer. Show how you know.**

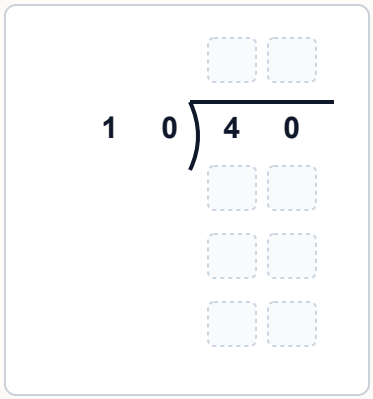

What is 40 ÷ 10?

(A) 4

(B) 10

(C) 30

(D) 400

1. **Divide** *How many fit?*
2. **Multiply** *Multiply back.*
3. **Subtract** *What is left?*
4. **Bring down** *Next digit.*

PART 3 Explain and correct

reasoning

5 **Answer in complete sentences.**

What do you want math to be like for you this year?

SENTENCE STARTER This year I want math to ___ .
One thing I will do is ___ .

WRITE YOUR ANSWER

EXPLAIN YOUR THINKING

You and your partner each put a card in a different column. Take the one you disagreed about: what has to be true about an activity for it to count as doing math, even when nobody calls it math?

SENTENCE STARTER ___ is doing math because the person has to ___.

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? □ 4 · I can teach it □ 3 · I've got it □ 2 · I need a hint □ 1 · I need help

LESSON 1.1

Math is Mine

Set B · Version B · Second form · core practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe the ways we are all doers of math, and compare my math story with a classmate's.

WHY THIS MATTERS You have been doing math your whole life — at home, in school, and in your neighborhood — often without calling it math. This year starts by naming what you already do. Today you will take a Strengths Inventory — naming one thing you can already do well and one area you want to grow — and you will write your own math story. Then you will read a classmate's story and find one thing that is the same as yours and one thing that is different. Estimating the riders on that Ferris wheel is math. So is deciding whether an answer is reasonable.

PART 1 Understand the idea

models and meaning

1 **Circle the letter of the best answer. Show how you know.**

Which statement best shows what this lesson means by "we are all doers of math"?

(A) Everyone gets the same score if they try hard enough

(B) Everyone must solve problems the same way to be correct

(C) Only the fastest students are really doing math

(D) Everyone uses mathematical thinking daily, in different ways, and sharing those ways helps us grow

SHOW YOUR WORK

PART 2 Apply it

real-world problems

2 **Circle the letter of the best answer. Show how you know.**

You have 3 bags with 5 apples in each bag. How many apples in all?

(A) 2 apples

(B) 8 apples

(C) 15 apples

(D) 35 apples

SHOW YOUR WORK

3 **Circle the letter of the best answer. Show how you know.**

What we believe about ourselves, about others, and about what we are learning shapes us. Your classmate has a math story too, and it is not the same as yours. The lesson says, “What we believe about ourselves, about others, and about what we are learning shapes us.” Why does the Strengths Inventory ask you to name a growth area, not only a strength?

(A) Growth areas are only for students who are behind in math

(B) Naming what you want to grow shapes how you approach learning all year, just as naming a strength does

(C) The growth area replaces the strength, since you can only claim one

(D) Naming a growth area has nothing to do with your beliefs about yourself

SHOW YOUR WORK

4 **Circle the letter of the best answer. Show how you know.**

What we believe about ourselves, about others, and about what we are learning shapes us. Your classmate has a math story too, and it is not the same as yours. One student's math story says she liked math more once she started drawing problems; another's says he liked it more once he memorized steps. What is the point of hearing a classmate's story that is DIFFERENT from yours?

(A) It shows there is more than one valid way to be a doer of math, and you might borrow a new strategy

(B) Whichever method is faster is the “right” one, so you should switch to it

(C) If a classmate's story differs from yours, one of you must be doing math wrong

(D) It doesn't matter — you only need to hear stories similar to your own

SHOW YOUR WORK

5 **Circle the letter of the best answer. Show how you know.**

What we believe about ourselves, about others, and about what we are learning shapes us. Your classmate has a math story too, and it is not the same as yours. Which of these is the BEST example of a specific math strength for the Connect prompt?

(A) “I'm good at math”

(B) “I can explain my thinking out loud so others can follow my steps”

(C) “I got an A last year”

(D) “Math is easy for me”

SHOW YOUR WORK

EXPLAIN YOUR THINKING

You and your partner each put a card in a different column. Take the one you disagreed about: what has to be true about an activity for it to count as doing math, even when nobody calls it math?

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help
