LESSON 1.1

Math is Mine

Start here · Words, worked example, and sentence starters

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe the ways we are all doers of math, and compare my math story with a classmate's.

WHY THIS MATTERS You have been doing math your whole life — at home, in school, and in your neighborhood — often without calling it math. This year starts by naming what you already do. Today you will take a Strengths Inventory — naming one thing you can already do well and one area you want to grow — and you will write your own math story. Then you will read a classmate's story and find one thing that is the same as yours and one thing that is different. Estimating the riders on that Ferris wheel is math. So is deciding whether an answer is reasonable.

START HERE

Words for this lesson

Read each word before you begin. Say it out loud.

WORD	WHAT IT MEANS	EXAMPLE
doer of math *Spanish: persona que hace matemáticas*	Anyone who uses mathematical thinking — which is everyone, every day.	Splitting a bill 4 ways at dinner — that is a doer of math.
math story *Spanish: historia matemática*	Your own history with mathematics — what you have done, felt, and learned so far.	"In 3rd grade I hated fractions; this year I can explain them."
strength *Spanish: fortaleza*	Something you already do well and can share with others.	"I am good at mental math with money" — a strength you can teach.
decompose *Spanish: descomponer*	To break a number into parts that add, subtract, multiply, or divide back to it.	78.5 = 70 + 8.5, and also 157 ÷ 2 — both rebuild the same number.
estimate *Spanish: estimar*	A reasoned answer that is close enough to be useful, without counting every one.	20 cars × about 4 riders ≈ 80 people on the Ferris wheel.

HOW IT WORKS

Worked example

These numbers are not on your problems. The steps are. Follow them with your own numbers.

The Ferris wheel has 20 cars, and about 4 people fit in each car. About how many people can ride at one time?

1. I count the cars: 20. Then I estimate how many riders fit in one car: about 4.
2. I do not count every person — an estimate is a reasoned answer that is close enough to be useful.
3. 20 × 4 = 80, so I would say "about 80 people."

NOW YOU TRY

Same steps, your turn

The steps are the same as the worked example. The numbers are yours. Do the work.

78.5 = 70 + 8.5.

1. _____
2. _____
3. _____

Answer: _____

SAY IT AND WRITE IT

Sentence starters

Finish each sentence out loud with a partner. Then use them in your writing.

- _____ is doing math because the person has to _____.
- I used math when I _____ .
- It was math because I had to _____ .
- One thing I do well is _____ .

Word bank doer of math | math story | strength | decompose | estimate

WATCH OUT!

A common mistake

Believing that 'doing math' only counts when it happens on paper in a classroom.

- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe the ways we are all doers of math, and compare my math story with a classmate's.

WHY THIS MATTERS You have been doing math your whole life — at home, in school, and in your neighborhood — often without calling it math. This year starts by naming what you already do. Today you will take a Strengths Inventory — naming one thing you can already do well and one area you want to grow — and you will write your own math story. Then you will read a classmate's story and find one thing that is the same as yours and one thing that is different. Estimating the riders on that Ferris wheel is math. So is deciding whether an answer is reasonable.

HOW IT WORKS

Worked example

These numbers are not on your problems. The steps are. Follow them with your own numbers.

The Ferris wheel has 20 cars, and about 4 people fit in each car. About how many people can ride at one time?

1. I count the cars: 20. Then I estimate how many riders fit in one car: about 4.
2. I do not count every person — an estimate is a reasoned answer that is close enough to be useful.
3. 20 × 4 = 80, so I would say "about 80 people."

PART 1 Apply it

real-world problems

1 **Circle the letter of the best answer. Show how you know.**

About how many people can ride the Ferris wheel at one time if it has 20 cars that each hold about 4 people?

(A) About 5
(B) About 24
(C) About 80
(D) About 400

STEPS TO TRY
1. How many groups are there, and how big is each group?
2. 20 groups of 4.
3. Multiply 20 × 4.

SHOW YOUR WORK

2 **Circle the letter of the best answer. Show how you know.**

Which of these is a correct way to decompose 78.5?

(A) 7 + 8.5
(B) 70 + 8.5
(C) 70 + 8.05
(D) 78 + 5

STEPS TO TRY

1. Add each option and see what you get.
2. The parts must total 78.5 exactly.
3. Add the two parts in each choice. Which total lands exactly on 78.5?

SHOW YOUR WORK

3 **Circle the letter of the best answer. Show how you know.**

Another correct decomposition of 78.5 is:

(A) 75 − 3.5
(B) 80 − 1.5
(C) 80 − 2.5
(D) 80 + 1.5

STEPS TO TRY

1. Start at 80. How far down is 78.5?
2. 80 − 78.5 = 1.5.
3. Check your subtraction against each choice: which one starts above 78.5 and takes away exactly that gap?

SHOW YOUR WORK

PART 2 Explain and correct

reasoning

4 **Answer in complete sentences.**

Name one way you used math outside of school this week.

SENTENCE STARTER I used math when I ___ .
It was math because I had to ___ .

WRITE YOUR ANSWER

EXPLAIN YOUR THINKING

You and your partner each put a card in a different column. Take the one you disagreed about: what has to be true about an activity for it to count as doing math, even when nobody calls it math?

SENTENCE STARTER ___ is doing math because the person has to ___.

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help
