Math is Exploring and Thinking — Homework

Lesson 1-2 • Standard 5.NF.B.4

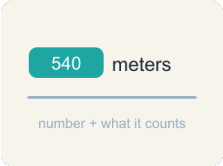

Name: _____ **Period:** _____ **Date:** _____

Today's Goals

Content: I can make sense of a problem, plan a strategy, and use fractions of a whole number to compare quantities.

Language: I can explain my plan using the words we know, we don't know, and my strategy is ___ .

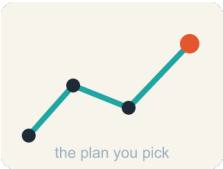

Key Words

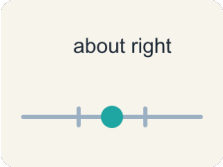

quantity (cantidad) — An amount in a problem — a number with a meaning attached, like 540 meters.

relationship (relación) — How two quantities compare or connect to each other.

strategy (estrategia) — A plan for how to solve a problem before you start computing.

reasonable (razonable) — A solution that makes sense in the context of the problem.

persevere (perseverar) — To keep working on a problem, checking your progress and adjusting your plan when you get stuck.

Practice

Show your work. Use the blank space under each problem.

1. Which of these is a correct way to decompose 105.76?

A. 10 + 5.76
B. 100 + 5.76
C. 100 + 5.076
D. 105 + 7.6

---

2. Which is another correct decomposition of 105.76?

A. 106 − 0.34

B. 110 − 4.24
C. 110 − 5.24
D. 110 + 4.24

3. The Rio de Janeiro building will be 9/10 as tall as One World Trade Center (540 meters). How tall will it be?

A. 54 meters
B. 486 meters
C. 594 meters
D. 4,860 meters

4. The Tokyo building will be 6/5 as tall as One World Trade Center (540 meters). How tall will it be?

A. 108 meters
B. 432 meters
C. 450 meters
D. 648 meters

5. Without calculating, which new building must be TALLER than One World Trade Center, and why?

A. London, because 5/6 has a 6 in it
B. Tokyo, because 6/5 is greater than 1
C. Rio de Janeiro, because 9/10 is close to 1
D. None — a fraction of 540 is always less than 540

6. Miguel walked 2 miles. Deon walked less than Miguel, and Evelyn walked more than Miguel. Choose possible distances for Deon and Evelyn and explain how you checked both relationships.

7. You calculate 5/6 × 540 and get 650 meters. What does the checking step of your plan tell you?

A. The answer is fine because it is close to 540
B. The answer is fine because 650 is a bigger number than 5/6
C. The answer is unreasonable — 5/6 of 540 must be LESS than 540
D. Checking is only needed when the problem asks for it

8. The lesson says we check on our progress toward a solution and adjust our plan as needed. Describe one way YOU can check on your progress while solving a problem.

9. Compute each building's height as a fraction of 540 meters.

Building plan	Fraction of 540 m	Height (m)
Rio de Janeiro	9/10 of 540	
Tokyo	6/5 of 540	

Building plan	Fraction of 540 m	Height (m)
Prototype	1/2 of 540
