Math is In My World — Homework

Lesson 1-3 • Standard 5.NBT.B.7

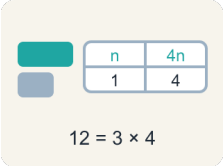

Name: _____ **Period:** _____ **Date:** _____

Today's Goals

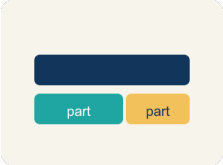

Content: I can represent a real-world situation with a tape diagram or table and use decimal operations to solve it.

Language: I can describe my tool using the words tape diagram, table, and this represents ___ .

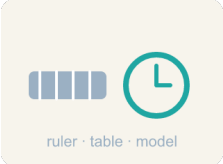

Key Words

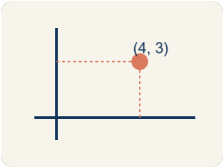

representation (representación) — A picture, diagram, table, or equation that shows the mathematics in a situation.

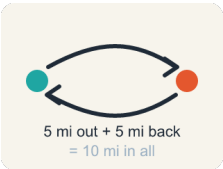

tape diagram (diagrama de cintas) — A rectangle cut into equal parts that helps you visualize how a total breaks apart.

tool (herramienta) — Anything you choose to help you see relationships and solve a problem — a table, a diagram, a graph.

ordered pair (par ordenado) — Two numbers that go together, like a time and a number of trips, that you can plot as a point.

round trip (viaje de ida y vuelta) — A complete journey from the start, to the destination, and back to the start.

Practice

Show your work. Use the blank space under each problem.

1. One tram ride takes 12.5 minutes. How many minutes do 10 rides take?

A. 1.25 minutes
B. 22.5 minutes
C. 125 minutes
D. 1,250 minutes

2. Five Breaks: which of these is a correct way to decompose 12.5?

A. 1 + 2.5
B. 10 + 2.5
C. 10 + 2.05
D. 12 + 5

3. The 50 rides take 625 minutes. About how many HOURS is that?

A. About 6.25 hours
B. About 10.42 hours
C. About 12.5 hours
D. About 62.5 hours

4. How does the answer change for 2,000 passengers? Each ride carries 80 passengers and takes 12.5 minutes. How many MINUTES are needed?

A. 31.25 minutes
B. 300 minutes
C. 312.5 minutes
D. 3,125 minutes

5. One round trip takes 35 minutes. Using the table (35 → 1, 350 → 10, 525 → 15, 700 → 20), how many round trips does a tram car complete in 10 hours?

A. 15 round trips
B. 17 round trips
C. 18 round trips
D. 20 round trips

6. Compare these tram problems. A: A tram carries 80 passengers per ride and each ride takes 35 minutes. How long would 4,000 passengers take? B: A different tram completes a round trip in 12.5 minutes. How many round trips fit in 10 hours? How are the problems alike and different?

7. The round trip is 5 miles. How far does a tram car travel in 5 round trips?

A. 1 mile
B. 10 miles
C. 25 miles
D. 50 miles

8. How does the answer change if the tram must transport 6,000 passengers? (Each ride carries 80 passengers and takes 12.5 minutes.) Show your steps.

9. Each tram ride takes 12.5 minutes. Complete the table of total minutes.

Rides	Expression	Total minutes
10	10 × 12.5	
20	20 × 12.5	
50	50 × 12.5
