LESSON 1.6

Math is Ours

Set B · Version A · Second form · supported practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe my problem-solving process, name strategies for getting unstuck, and identify the behaviors that make our class a community of math thinkers.

WHY THIS MATTERS What is math? This lesson's answer: math is about DOING — solving problems, getting stuck, trying again, and doing it together. Think about the last time you worked with someone to solve a math problem. What did you actually do?

REMEMBER

Math is Ours

Math Practices: Collaboration & Critique Problem solving is not one lightning bolt — it is a process you can name, practice, and share. And when the process stalls, getting stuck is part of doing math, not a sign you can't.

1. Explain your reasoning using precise mathematical language.
2. Listen actively to partner strategies and compare approaches.
3. Build on shared agreements to reach consensus

Words: representation *(representación)* · strategy *(estrategia)* · critique *(criticar constructivamente)* · community agreement *(acuerdo comunitario)*

PART 1 Understand the idea

models and meaning

1 **Write the name of the correct group on each line.**

Sort each behavior by its effect on our math community.

Groups: Builds our community · Hurts our community

_____ Asking a partner to explain their strategy

_____ Comparing two different approaches to the same problem

_____ Saying 'I disagree, because...' with a reason

_____ Making sure every group member gets to talk

_____ One student doing all the talking

_____ Calling an answer 'wrong' with no reason

_____ Keeping your strategy secret so you finish first

_____ Laughing when someone makes a mistake

HINT Community behaviors invite more voices in; the others shut voices out.

2 **Complete the table. Show how you found each value.**

Use the bicycle rack problem to complete the table.

Question	Thinking	Answer
Wheels on a rack of 8 bikes		
Wheels on the bigger rack (6 times as many)		
Bikes on the bigger rack		

HINT Each answer becomes the input for the next question — read the table top to bottom.

SHOW YOUR WORK

PART 2 Apply it

real-world problems

3 **Circle the letter of the best answer. Show how you know.**

A pattern goes 2, 4, 6, 8. What is the next number?

(A) 9
(B) 10
(C) 12
(D) 16

SHOW YOUR WORK

4 **Circle the letter of the best answer. Show how you know.**

The pattern rule is “add 5.” If you start at 10, what comes next?

(A) 5
(B) 15
(C) 20
(D) 50

SHOW YOUR WORK

5 **Circle the letter of the best answer. Show how you know.**

The pattern rule is “subtract 3.” If you start at 20, what comes next?

(A) 3
(B) 17
(C) 23
(D) 60

SHOW YOUR WORK

EXPLAIN YOUR THINKING

Compare your two sorts. Which move belongs BEFORE you're stuck and which one only helps AFTER the plan stalls — and how would you tell a classmate which one they need right now?

SENTENCE STARTER ___ comes before getting stuck because ___, but ___ only helps once ___.

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help

LESSON 1.6

Math is Ours

Set B · Version B · Second form · core practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can describe my problem-solving process, name strategies for getting unstuck, and identify the behaviors that make our class a community of math thinkers.

WHY THIS MATTERS What is math? This lesson's answer: math is about DOING — solving problems, getting stuck, trying again, and doing it together. Think about the last time you worked with someone to solve a math problem. What did you actually do?

PART 1 Understand the idea

models and meaning

1 **Circle the letter of the best answer. Show how you know.**

Which statement best captures what this lesson means by 'Math is Ours'?

(A) Math belongs to whoever finishes first

(B) Working together means one person solves while the others watch

(C) Getting stuck means math is not for you

(D) We are a community of math thinkers and doers — we work together and on our own, showing respect for our classmates, our community, ourselves, and our math ideas

SHOW YOUR WORK

PART 2 Apply it

real-world problems

2 **Circle the letter of the best answer. Show how you know.**

Communities often have agreements that all members agree to in order to be part of the community. Our math class is a community of thinkers and doers — when we work together we listen attentively, share our thinking, respect others' ideas, critique ideas (not classmates), and take turns. When we work alone we stay focused, seek help when stuck, and respect classmates' boundaries. Which is an example of a working-together agreement that supports the class as a community of thinkers?

(A) Only share ideas when you're sure they're correct

(B) Critique the ideas that are shared, not the classmates who shared them

(C) Let the fastest student finish problems for the group

(D) Work silently so no one is distracted

3 **Circle the letter of the best answer. Show how you know.**

Communities often have agreements that all members agree to in order to be part of the community. Our math class is a community of thinkers and doers — when we work together we listen attentively, share our thinking, respect others' ideas, critique ideas (not classmates), and take turns. When we work alone we stay focused, seek help when stuck, and respect classmates' boundaries. Which is an example of a working-alone agreement that still supports the whole class?

(A) Seek help when stuck, without interrupting classmates unnecessarily

(B) Never ask for help, even when stuck

(C) Interrupt a classmate anytime you have a question

(D) Skip any problem you find difficult

SHOW YOUR WORK

4 **Circle the letter of the best answer. Show how you know.**

Communities often have agreements that all members agree to in order to be part of the community. Our math class is a community of thinkers and doers — when we work together we listen attentively, share our thinking, respect others' ideas, critique ideas (not classmates), and take turns. When we work alone we stay focused, seek help when stuck, and respect classmates' boundaries. Why should the class agree on both a together-agreement and an alone-agreement?

(A) Because math class includes both kinds of work, and each kind needs its own way to support the whole community

(B) Because working alone matters more than working together

(C) Because agreements for working together are only for advanced students

(D) Because agreements about working alone don't affect other students
