LESSON 10.6

Math is Mine

Set B · Version A · Second form · supported practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can look back at my answers from Lesson 1-1, describe how my math biography has changed this year, and recognize ways we are all doers of math.

WHY THIS MATTERS Throughout this school year, you have seen math used in many different activities and used it to solve different kinds of problems. Today you look back at the answers you wrote to the questions in Lesson 1-1 — and see how far your math story has come.

REMEMBER

Math is Mine

Mathematical Reflection & Portfolio Culmination In Lesson 1-1 you estimated riders on a Ferris wheel, decomposed 78.5, and wrote your math story. The question now is not 'what is math?' but 'how have I changed as a doer of math?'

1. Synthesize grade-level mastery across Number Systems, Ratios, Expressions, Geometry, and Statistics.
2. Justify problem-solving strategies using multiple representations (equations, graphs, models).
3. Reflect on mathematical growth and communicate solutions with precision and confidence

Words: math biography *(biografía matemática)* · reflect *(reflexionar)* · growth *(crecimiento)* · confidence *(confianza)* · community *(comunidad)*

PART 1 Understand the idea

models and meaning

1 **Write the name of the correct group on each line.**

Sort this year's ideas into their areas of mathematics.

Groups: Percents · Statistics · Algebra

_____ 50% of 157

_____ The 10% benchmark

_____ The median of a data set

_____ A dot plot of class data

_____ The equation y = kx

_____ The independent variable

HINT Percents compare to 100; statistics describes data; algebra relates variables.

2 **Complete the table. Show how you found each value.**

Answer each quick problem with this year's skills — the same numbers you met in Lesson 1-1.

Problem from this year	Thinking	Answer
50% of 157		
10% of 480		
Riders per hour: 80 per turn × 6 turns		

HINT 50% is a half; 10% moves the decimal one place left.

SHOW YOUR WORK

PART 2 Apply it

real-world problems

3 **Circle the letter of the best answer. Show how you know.**

A bead pattern goes A, B, C, A, B, C, A, B, C. What is the pattern unit?

(A) A
(B) A, B, C, A, B, C
(C) A, B, C
(D) A, A, B, B, C, C

SHOW YOUR WORK

4 **Circle the letter of the best answer. Show how you know.**

A bead pattern repeats the unit A, B, C. What is the 10th bead?

(A) A
(B) B
(C) C
(D) There is no 10th bead

SHOW YOUR WORK

5 **Circle the letter of the best answer. Show how you know.**

What makes a repeating design predictable?

(A) Using many different colors

(B) Making every piece a different size

(C) A pattern unit that repeats in the same order

(D) Leaving gaps between the pieces

SHOW YOUR WORK

EXPLAIN YOUR THINKING

Tell your partner one thing you moved into the 'learned this year' column. What could you not do in September, and what specifically changed — a strategy, a representation, or your confidence?

SENTENCE STARTER In September I could not ___. Now I can, because I learned to ___.

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help

LESSON 10.6

Math is Mine

Set B · Version B · Second form · core practice

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can look back at my answers from Lesson 1-1, describe how my math biography has changed this year, and recognize ways we are all doers of math.

WHY THIS MATTERS Throughout this school year, you have seen math used in many different activities and used it to solve different kinds of problems. Today you look back at the answers you wrote to the questions in Lesson 1-1 — and see how far your math story has come.

PART 1 Understand the idea

models and meaning

1 **Circle the letter of the best answer. Show how you know.**

You and your classmates each wrote about your math stories at the beginning of the school year. Everyone has their own math story, and as you encounter new challenges and experiences, your story might change. Which statement best distinguishes a real comparison of math stories with a classmate from just repeating what you already believe?

(A) Writing 'we both got better at math' and stopping there

(B) Naming something the classmate actually said, plus one genuine similarity AND one genuine difference between the two stories

(C) Copying your own September answer word for word

(D) Skipping the classmate entirely and writing only about yourself

SHOW YOUR WORK

2 **Circle the letter of the best answer. Show how you know.**

Which statement best captures this lesson's end-of-year summary of 'Math is Mine'?

(A) We are all doers of math in daily life, and our math stories continue to grow and evolve as we grow

(B) Math belongs only to the students who mastered every unit this year

(C) A math story is written once in September and never changes

(D) Math stops mattering once the school year ends

SHOW YOUR WORK

PART 2 Apply it

real-world problems

3 **Circle the letter of the best answer. Show how you know.**

A tile border repeats a 4-tile unit 6 times. How many tiles are in the border?

(A) 10

(B) 12

(C) 24

(D) 46

SHOW YOUR WORK

4 **Circle the letter of the best answer. Show how you know.**

You and your classmates each wrote about your math stories at the beginning of the school year. Everyone has their own math story, and as you encounter new challenges and experiences, your story might change. In September you estimated the Ferris wheel as 20 cars × 4 riders = about 80. Which of these uses a tool you did NOT have in September to extend that same estimate?

(A) Multiplying the 80 riders per turn by 6 turns per hour to find a rate of 480 riders per hour

(B) Adding the 20 cars and 4 riders together to get 24

(C) Guessing a completely different, unrelated number

(D) Deciding not to estimate the Ferris wheel at all

SHOW YOUR WORK

5 **Circle the letter of the best answer. Show how you know.**

You and your classmates each wrote about your math stories at the beginning of the school year. Everyone has their own math story, and as you encounter new challenges and experiences, your story might change. A student writes, 'My classmate's story changed the same way mine did — we both feel more confident now.' What is missing from this comparison?

(A) The classmate's full name and grade

(B) A genuine DIFFERENCE between the two stories, not just a shared similarity

(C) The exact date Lesson 1-1 was taught

(D) A drawing of the Ferris wheel

SHOW YOUR WORK

EXPLAIN YOUR THINKING

Tell your partner one thing you moved into the 'learned this year' column. What could you not do in September, and what specifically changed — a strategy, a representation, or your confidence?

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help
