LESSON 10.6

Math is Mine

Start here · Words, worked example, and sentence starters

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can look back at my answers from Lesson 1-1, describe how my math biography has changed this year, and recognize ways we are all doers of math.

WHY THIS MATTERS Throughout this school year, you have seen math used in many different activities and used it to solve different kinds of problems. Today you look back at the answers you wrote to the questions in Lesson 1-1 — and see how far your math story has come.

START HERE

Words for this lesson

Read each word before you begin. Say it out loud.

WORD	WHAT IT MEANS	EXAMPLE
math biography *Spanish: biografía matemática*	The story of your relationship with math — and how it has changed over time.	September: “I am not a math person.” June: “I can explain why it works.”
reflect *Spanish: reflexionar*	To look back at what you did, felt, and learned, and think about what it means.	Looking back at the tram problem: what worked, what you would change.
growth *Spanish: crecimiento*	The change between what you could do before and what you can do now.	In Unit 1 you estimated 80 riders; now you find 480 riders per hour.
confidence *Spanish: confianza*	Trusting yourself to try a problem, even when the first attempt might fail.	Starting a hard problem before you are sure it will work.
community *Spanish: comunidad*	The people and places around you — where math shows up outside the classroom.	The people and places where math shows up — home, work, the neighborhood.

HOW IT WORKS

Worked example

These numbers are not on your problems. The steps are. Follow them with your own numbers.

In September I estimated the Ferris wheel: 20 cars with about 4 riders each is 20 × 4 = 80 riders — 'about 80.'

1. Now I can go further with this year's math: at 6 turns an hour, that wheel moves about 80 × 6 = 480 riders per hour.
2. Same wheel, same me — but my toolbox grew. That difference IS my math story.

NOW YOU TRY

Same steps, your turn

The steps are the same as the worked example. The numbers are yours. Do the work.

In September we decomposed 78.5 as 70 + 8.5 and 80 − 1.5.

1. _____
2. _____

Answer: _____

SAY IT AND WRITE IT

Sentence starters

Finish each sentence out loud with a partner. Then use them in your writing.

- In September I could not _____. Now I can, because I learned to _____.
- In September I thought math was _____ .
- Now I think _____ because _____ .
- This year at home I used math to _____ .

MASTERY CHECK
- ☐ Exceeds
- ☐ Meets target
- ☐ Needs practice

Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can look back at my answers from Lesson 1-1, describe how my math biography has changed this year, and recognize ways we are all doers of math.

WHY THIS MATTERS Throughout this school year, you have seen math used in many different activities and used it to solve different kinds of problems. Today you look back at the answers you wrote to the questions in Lesson 1-1 — and see how far your math story has come.

HOW IT WORKS

Worked example

These numbers are not on your problems. The steps are. Follow them with your own numbers.

In September I estimated the Ferris wheel: 20 cars with about 4 riders each is 20 × 4 = 80 riders — 'about 80.'

1. Now I can go further with this year's math: at 6 turns an hour, that wheel moves about 80 × 6 = 480 riders per hour.
2. Same wheel, same me — but my toolbox grew. That difference IS my math story.

PART 1 Apply it

real-world problems

1 **Circle the letter of the best answer. Show how you know.**

In Lesson 1-1 you estimated the Ferris wheel: 20 cars each holding about 4 people. About how many riders was that?

(A) About 5
(B) About 24
(C) About 80
(D) About 400

STEPS TO TRY
1. This is the very first estimate of the year — 20 groups of 4.
2. Multiply the cars by the riders per car.
3. 20 × 4.

SHOW YOUR WORK

2 **Circle the letter of the best answer. Show how you know.**

In September you decomposed 78.5 as 70 + 8.5. Which of these ALSO equals 78.5, using division?

(A) 78.5 ÷ 2
(B) 156 ÷ 2
(C) 157 ÷ 2
(D) 157 ÷ 4

STEPS TO TRY

1. Which quotient lands exactly on 78.5?
2. Try doubling 78.5 first.
3. Double 78.5 first. The number you land on is the one being divided by 2.

SHOW YOUR WORK

PART 2 Explain and correct

reasoning

3 **Answer in complete sentences.**

How has your attitude about math changed over the year?

SENTENCE STARTER In September I thought math was ___ .
Now I think ___ because ___ .

WRITE YOUR ANSWER

4 **Answer in complete sentences.**

How have you used math at home or with your family in new or different ways this year?

SENTENCE STARTER This year at home I used math to ___ .
That was new for me because ___ .

WRITE YOUR ANSWER

EXPLAIN YOUR THINKING

Tell your partner one thing you moved into the 'learned this year' column. What could you not do in September, and what specifically changed — a strategy, a representation, or your confidence?

SENTENCE STARTER In September I could not ___. Now I can, because I learned to ___.

3-Point Exit Checklist: ☐ 1. Units & Labels Verified ☐ 2. Mathematical Reasoning Stated ☐ 3. Calculations Double-Checked

How did it go? ☐ 4 · I can teach it ☐ 3 · I've got it ☐ 2 · I need a hint ☐ 1 · I need help
