Multiply Decimals — Homework

Lesson 2-12 • Standard 6.NOS.3

Name: _____ **Period:** _____ **Date:** _____

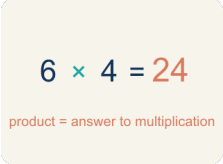

Today's Goals

Content: I can multiply decimals and place the decimal point correctly in the product.
Language: I can explain my work using the words product, decimal point, estimate, and decimal places.

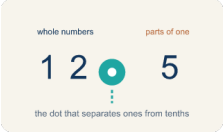

Key Words

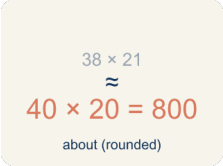

Multiply Decimals (Multiplicar decimales) — Find the product of decimals, then use place value to place the decimal point.

Product (Producto) — The answer when you multiply.

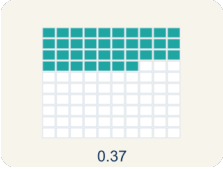

Decimal point (Punto decimal) — The dot that splits the whole number from the part after it.

Estimate (Estimar) — A close answer you get by rounding first.

Place value (Valor posicional) — What a digit is worth based on where it sits in a number.

Decimal places (Cifras decimales) — How many digits come after the decimal point.

Practice

Show your work. Use the blank space under each problem.

1. What is 3.4 × 2.6?

A. 0.884
B. 8.48
C. 8.84
D. 88.4

---

2. What is 0.7 × 1.5?

A. 0.105
B. 1.05
C. 1.50
D. 10.5

---

3. Match each expression to its product.

Item	Answer choices
____ 2.5 × 4	F. 9
____ 1.2 × 0.3	E. 0.48
____ 3.6 × 0.5	D. 12
____ 4.8 × 2.5	C. 1.8
____ 0.6 × 0.8	B. 0.36
____ 7.5 × 1.2	A. 10

---

4. Complete each decimal multiplication.

Problem	Product
6.4 × 3.5	
0.25 × 0.4	
8.3 × 2.1	
12.5 × 0.8	

---

5. A car travels 55.5 miles per hour for 2.4 hours. How far does it go?

A. 13.32 miles
B. 57.9 miles
C. 133.2 miles
D. 1,332 miles

---

6. Sort: when you multiply two decimals, is the product GREATER than both factors, or LESS than at least one factor?

Groups: Product Greater Than Both Factors | Product Less Than at Least One Factor

- 3.5 × 4 → _____
- 6 × 2.5 → _____
- 10 × 1.5 → _____
- 0.5 × 8 → _____
- 0.3 × 0.4 → _____
- 0.7 × 6 → _____

---

7. Spot the Common Mistake — Placing the Decimal Point

Step 1 (Problem): 1.5 × 2.4
Step 2 (Multiply as whole numbers): 15 × 24 = 360
Step 3 (Count decimal places): 1.5 has 1 decimal place and 2.4 has 1 decimal place → 2 total
Step 4 (Place the decimal point): Move the point 2 places in 360 to get 0.36

Which step has the mistake? Explain and fix it:

---

8. A customer orders 3 taco baskets at $4.25 each. What is the total before tax?

A. $1.275
B. $12.15

C. $12.75
D. $127.50

---

9. Each lemonade uses 0.6 of a cup of sugar, and sugar costs $0.40 per cup. How much sugar cost is in one lemonade? (0.6 × 0.4)

A. $0.024
B. $0.24
C. $2.40
D. $24.00

---

10. The truck sells 2.5 pounds of fries, and each pound earns $1.20 in profit. What is the total profit? (2.5 × 1.2)

A. $0.30
B. $3.00
C. $3.70
D. $30.00
