Name _____ **Date** _____ **Period** _____

LEARNING TARGET I can find the percent of a number using an equation or a model.

WHY THIS MATTERS It's Discount Day at the arcade! Different games are offering percent-off deals on ticket prices. The claw machine is 25% off its usual 60-ticket price, and the racing game is 40% off 80 tickets. You need to calculate the discounts to figure out how many tickets each game actually costs!

REMEMBER

Find and Compare with Percentages

Finding the Percent of a Number. Formula: Part = Percent × Whole A percent is a piece of a whole. The whole is called the base — it is the number right after the word "of," and "of" means multiply. Your answer is the piece you get, called the part.

1. Identify the percent and the whole (base amount).
2. Convert the percent to a decimal or simplified fraction.
3. Multiply the decimal/fraction by the whole to calculate the part

Words: **Percent *(Porcentaje)*** **Base *(Base)*** **Part *(Parte)*** **Equation *(Ecuación)*** **Discount *(Descuento)***
