UNIT 3 • STANDARD 6.AT.3

# Compare Ratio Relationships

Lesson 3-5 • Teacher Copy

**Name:** \_\_\_\_\_

**Date:** \_\_\_\_\_

**Class:** \_\_\_\_\_

## TODAY'S OBJECTIVES

**Content Objective:** I can compare ratios by finding unit rates or using equivalent ratios.

**Language Objective:** I can explain my comparison using the words unit rate, equivalent ratio, compare, and common denominator.

See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

Fill in each blank as we go. Use the Word Bank to help you.

## WORD BANK — FILL EACH BLANK WITH THE BEST WORD

Unit rate

Equivalent ratio

Compare

Simplify

Common denominator

Common multiple

Least common multiple

Benchmark

Tap any word to see its meaning and a picture.

1

A rate that tells the amount for exactly one unit, like 5 miles per 1 hour, is a

2

Two ratios that make the same comparison are

3

To decide which ratio is greater or if they are equal is to

 them.
 

4

Writing a ratio with smaller numbers that compares the same way, like  $6:9 = 2:3$ , is to

 it.

5 A denominator shared by two fractions so they can be compared is a

6 A number that is a multiple of both terms is a .

7 The smallest multiple two numbers share is the .

8 A shared amount used to compare two ratios is a .

## Write About the Math

Two pizza shops are running deals. Mario's Pizza sells 2 large pizzas for \$18. Sal's Pizza sells 3 large pizzas for \$25. A school needs to buy pizza for a class party and wants to get the best deal per pizza?

Say your answer to a partner first. Then write it, using at least two of these words:

☐ **Unit rate**  
*Tasa unitaria*

☐ **Equivalent ratio**  
*Razón equivalente*

☐ **Compare**  
*Comparar*

☐ **Simplify**  
*Simplificar*

☐ **Common denominator**  
*Denominador común*

**Model:** When both ratios share 35 oz of milk, you only have to compare the cocoa amounts. — Students explain that equal milk (35 oz) makes the comparison fair, so 21 tbsp > 20 tbsp means Chef Reyes is more chocolatey.

### Start

Complete the frames. Use the word bank.

*Completa las oraciones. Usa el banco de palabras.*

- **Mario's costs** \_\_\_\_ **per pizza** and **Sal's costs** about \_\_\_\_ **per pizza**, so the better deal is \_\_\_\_.
- **My answer is** \_\_\_\_ **because** \_\_\_\_.

*Mi respuesta es \_\_\_\_ porque \_\_\_\_.*

### Build

Write two connected sentences. Use because, so, or but.

*Escribe dos oraciones conectadas. Usa porque, entonces o pero.*

- **My claim is** \_\_\_\_.  
*Mi afirmación es \_\_\_\_.*
- **My evidence is** \_\_\_\_, **so** \_\_\_\_.  
*Mi evidencia es \_\_\_\_, entonces \_\_\_\_.*

---

---

---

### Explain

Write a claim, give math evidence, and explain your reasoning.

*Escribe una afirmación, da evidencia matemática y explica tu razonamiento.*

---

---

---

---

---

---

☐ I answered the question.

☐ I used math evidence: numbers, an equation, or a model.

☐ I used at least two math words.

---

## Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

---

## Answer Key & Teacher Guide

1. **Notes 1:** Unit rate
2. **Notes 2:** Equivalent ratio
3. **Notes 3:** Compare
4. **Notes 4:** Simplify
5. **Notes 5:** Common denominator
6. **Notes 6:** Common multiple
7. **Notes 7:** Least common multiple
8. **Notes 8:** Benchmark
9. **Watch for this mistake:** *A common mistake in Compare Ratios is thinking the ratio with the bigger raw number automatically wins — like assuming Chef Tran's 8 tablespoons of cocoa must be more chocolatey than Chef Reyes's 6 tablespoons, without checking that the milk amounts (14 oz vs. 10 oz) are different. Never compare the raw numbers alone — always scale both ratios to the same amount or find each unit rate first.*
10. **Try It 1:** D. Recipe A — *Recipe A:  $4 / 10 = 0.4$  tsp per cup. Recipe B:  $3 / 8 = 0.375$  tsp per cup. Since  $0.4 > 0.375$ , Recipe A is saltier per cup.*
11. **Try It 2:** B. Chef Mara — *Chef Mara:  $6 / 9 = 0.666...$  oz per cupcake. Chef Devi:  $4 / 7 = 0.571...$  oz per cupcake. Since  $0.67 > 0.57$ , Chef Mara's glaze has more lemon per cupcake.*
