

Surface Area of Pyramids

Lesson 10-5

Name: _____

Date: _____

Class: _____

Key Vocabulary

Level 1 support

Picture first, then the word, then a plain-language meaning. Say each word out loud.

Like the Great Pyramid of Giza — a square on the bottom, 4 triangles slanting up to a point

Pyramid

A solid with a flat bottom and triangle sides that meet at one point on top.

If you slide your finger from the bottom edge up the triangle face to the top point — that distance is the slant height

Slant height

The height of a side triangle, measured along its slanted face.

A square pyramid has 4 lateral faces — one triangle for each side of the square base

Lateral face

A triangle side of a pyramid, not the bottom.

A square pyramid sits on a square base; base area = side × side

Base

The flat bottom of a pyramid.

The pointy top of a pyramid — all the slanted edges connect here

Apex

The point at the top of a pyramid where the sides meet.

For a square pyramid: lateral area = $4 \times (\frac{1}{2} \times \text{base edge} \times \text{slant height})$

Lateral area

The total area of just the side triangles, not the bottom.

Key Ideas & Notes

WHAT WE'RE LEARNING TODAY

I can find the surface area of a pyramid by adding the base area and the lateral faces.

1 Notice

Your class is building a pyramid-shaped display to showcase the time capsule at the school entrance.

2 Key idea

I can find the surface area of a pyramid by adding the base area and the lateral faces.

3 Words I'll use

Pyramid

Slant height

Lateral face

Base

Apex

Lateral area

Think About It

- How many faces does a square pyramid have?
- What shape is the base? What shape are the side faces?
- What is the difference between the height of the pyramid and the slant height?

Watch

Watch your teacher model one example. Jot what you see.

We try

Solve the next one together as a class.

You try

Now try one on your own.

Turn & Talk — Discussion Points

Level 1 support

Level 2

Talk with a partner about each prompt. If you need help getting started, use the Level 1 sentence stems. Ready for more? Try the Level 2 question.

LAUNCH

A square pyramid time capsule display has a square base and four triangular faces that meet at a point on top. To find its surface area, which parts do you need to measure?

Level 1 support

Start here: Surface area of a pyramid is the base area plus the areas of all the triangular lateral faces.

Need a hint?

Sentence starters (optional)

I need the area of the ____ plus the areas of the ____ triangular faces.

Necesito el área de la ____ más las áreas de las ____ caras triangulares.

The surface area is the ____ area plus the ____ faces.

El área de superficie es el área de la ____ más las caras ____.

Word bank: pyramid base lateral face slant height surface area

Listen for: Students explain a square pyramid's surface area = base area + the four triangular lateral faces, and that you add every face together.

Level 2

Why do you use the slant height, not the pyramid's vertical height, to find the area of each triangular face?

- I use the slant height because it is the ____ of each triangular face.
- The vertical height would not work because ____.

EXPLORE

For Display A (square base 6×6 , slant height 8), how did you combine the base area and the four triangular faces to get the total surface area?

Level 1 support

Start here: Add the base area to four times the area of one triangular face ($\frac{1}{2} \times \text{base} \times \text{slant height}$).

 Need a hint?**Sentence starters (optional)**

The base area is $___ \times ___ = ___$, **and one triangular face is** $\frac{1}{2} \times 6 \times 8 = ___$.

El área de la base es $___ \times ___ = ___$, y una cara triangular es $\frac{1}{2} \times 6 \times 8 = ___$.

The total surface area is the base plus $4 \times ___ = ___ \text{ in}^2$.

El área total de superficie es la base más $4 \times ___ = ___ \text{ in}^2$.

Word bank: **pyramid** **base** **lateral face** **slant height** **surface area**

Listen for: Students compute base = 36 in^2 , one face = 24 in^2 , four faces = 96 in^2 , total SA = 132 in^2 , distinguishing base from lateral faces.

Level 2

Two pyramids have the same 8×8 base but different slant heights. How will their surface areas compare, and which part stays the same?

- The pyramid with the larger slant height has $___$ surface area because $___$.
- The $___$ area stays the same because slant height only affects $___$.

CONNECT

A museum builds a square pyramid display case with base edge 3 ft and slant height 4 ft, and the base is open (no glass). Talk through how to find how much glass the 4 triangular sides need.

Level 1 support

Start here: Find one triangular face area, multiply by 4, and skip the base since it is open.

💡 Need a hint?

Sentence starters (optional)

Each triangular face has area $\frac{1}{2} \times \underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}} \text{ ft}^2$.

Cada cara triangular tiene área $\frac{1}{2} \times \underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}} \text{ ft}^2$.

Four faces need $\underline{\hspace{1cm}} \text{ ft}^2$ **of glass, and the base needs** $\underline{\hspace{1cm}}$ **because it is open.**

Cuatro caras necesitan $\underline{\hspace{1cm}} \text{ ft}^2$ de vidrio, y la base necesita $\underline{\hspace{1cm}}$ porque está abierta.

Word bank: (pyramid) (base) (lateral face) (slant height) (surface area)

Listen for: Students compute one face = $\frac{1}{2} \times 3 \times 4 = 6 \text{ ft}^2$, four faces = 24 ft^2 , and explain the open base is not counted, so only the lateral area matters.

Level 2

How does leaving the base open change which formula you use, and how would the answer change if the base needed glass too?

- Leaving the base open means I use only the $\underline{\hspace{1cm}}$ area because $\underline{\hspace{1cm}}$.
- If the base needed glass, I would add $\underline{\hspace{1cm}}$ to the total.

REFLECT

A classmate found a square pyramid's surface area by adding only the four triangular faces. What did they forget, and how would you correct it?

Level 1 support

Start here: They left out the base area, which must be added to the lateral faces for total surface area.

 **Need a hint?**

Sentence starters (optional)

They forgot to add the ____ area to the triangular faces.

Olvidaron sumar el área de la ____ a las caras triangulares.

The correct total surface area is the base plus the ____ lateral faces.

El área de superficie total correcta es la base más las ____ caras laterales.

Word bank: pyramid base lateral face slant height surface area

Listen for: Students identify the missing base area and state that total surface area = base area + all lateral (triangular) faces.

Level 2

When is it correct to leave out the base (like an open display case), and when must it be included? Generalize a rule.

- You leave out the base when ____, but include it when ____.
- In general, total surface area of a pyramid is always ____.

Guided Examples

Example 1

A square pyramid has a base edge of 5 in and a slant height of 7 in. What is the surface area?

Solution: Base: $5 \times 5 = 25 \text{ in}^2$. Each lateral face: $\frac{1}{2} \times 5 \times 7 = 17.5 \text{ in}^2$. Four faces: $4 \times 17.5 = 70 \text{ in}^2$.
 $SA = 25 + 70 = 95 \text{ in}^2$.

Answer: A. 95 in^2

Example 2

How many lateral (triangular) faces does a square pyramid have?

Solution: A square pyramid has a square base and 4 triangular lateral faces — one for each side of the square.

Answer: A. 4

Example 3

What is the area of one triangular face with base 8 in and slant height 6 in?

Solution: Area of a triangle = $\frac{1}{2} \times \text{base} \times \text{height} = \frac{1}{2} \times 8 \times 6 = 24 \text{ in}^2$.

Answer: A. 24 in^2

Write About the Math

The Writing Revolution

I can explain my work using the words pyramid, slant height, lateral face, and base.

1. Kernel Sentence subject + verb

Model: Pyramid is a solid with a flat bottom and triangle sides that meet at one point on top.

Pirámide es un sólido con un fondo plano y lados triangulares que se unen en un punto arriba.

Write a kernel sentence about pyramid. Use a subject and a verb.

Escribe una oración base sobre pirámide. Usa un sujeto y un verbo.

2. Sentence Expansion because · but · so

Kernel: Pyramid matters in math

Pirámide importa en matemáticas

Expand the kernel three ways. Add a reason, a contrast, and a result.

because
porque

Pyramid matters in math because ____.

Pirámide importa en matemáticas porque ____.

but
pero

Pyramid matters in math, but ____.

Pirámide importa en matemáticas, pero ____.

so
entonces

Pyramid matters in math, so ____.

Pirámide importa en matemáticas, entonces ____.

3. Sentence Types 4 ways to write a math idea

Statement
Afirmación

Tell one true fact about pyramid.
Di un hecho verdadero sobre pyramid.

Pyramid ____.

Question
Pregunta

Ask a question about pyramid.
Haz una pregunta sobre pyramid.

How does ____ ?

¿Cómo ____ ?

Exclamation
Exclamación

Show excitement about pyramid.
Muestra entusiasmo sobre pyramid.

Wow, ____ !

¡Guau, ____ !

Command
Mandato

Tell a partner what to do with pyramid.
Dile a un compañero qué hacer con pyramid.

First, ____ .

Primero, ____ .

4. Explain Your Reasoning use a sentence starter

I need the area of the ____ plus the areas of the ____ triangular faces.

Necesito el área de la ____ más las áreas de las ____ caras triangulares.

The surface area is the ____ area plus the ____ faces.

El área de superficie es el área de la ____ más las caras ____.

The base area is ____ $\times$ ____ = ____, and one triangular face is $\frac{1}{2} \times 6 \times 8 =$ ____.

El área de la base es ____ $\times$ ____ = ____, y una cara triangular es $\frac{1}{2} \times 6 \times 8 =$ ____.

Try It

Solve on your own. Check the answer key when you are done.

1. What is the area of one triangular face with base 8 in and slant height 6 in?

- A. 24 in^2
- B. 48 in^2
- C. 14 in^2
- D. 24 in^3

Show your work:

2. A square pyramid has a base area of 49 cm^2 and a total lateral area of 84 cm^2 . What is the surface area?

- A. 133 cm^2
- B. 84 cm^2
- C. 49 cm^2
- D. 133 cm^3

Show your work:

Stretch Your Thinking

Level 2 enrichment

Challenge task — explain your reasoning in full sentences.

Two pyramids have the same base area (64 in^2) but different slant heights. Pyramid A has slant height 6 in and Pyramid B has slant height 10 in. How much more surface area does Pyramid B have? Why does slant height affect surface area but NOT base area?

Sentence starter: Pyramid A: $SA = 64 + 4(\frac{1}{2} \times 8 \times 6) = 64 + \underline{\hspace{1cm}} = \underline{\hspace{1cm}} \text{ in}^2$. Pyramid B: $SA = 64 + 4(\frac{1}{2} \times 8 \times 10) = 64 + \underline{\hspace{1cm}} = \underline{\hspace{1cm}} \text{ in}^2$. Pyramid B has $\underline{\hspace{1cm}}$ more in^2 because $\underline{\hspace{1cm}}$. Slant height only affects $\underline{\hspace{1cm}}$ because $\underline{\hspace{1cm}}$.

Show your work:

Reflect — Exit Ticket

A square pyramid has a base edge of 6 in and a slant height of 5 in. What is the total surface area?

- A. 96 in^2
- B. 60 in^2
- C. 96 in^3
- D. 36 in^2

Your answer:

Answer Key & Teacher Guide

1. **Try It 1:** A. 24 in^2 — *Area of a triangle = $\frac{1}{2} \times \text{base} \times \text{height} = \frac{1}{2} \times 8 \times 6 = 24 \text{ in}^2$.*
2. **Try It 2:** A. 133 cm^2 — *SA = Base Area + Lateral Area = $49 + 84 = 133 \text{ cm}^2$.*
3. **Exit Ticket:** A. 96 in^2 — *Base: $6 \times 6 = 36 \text{ in}^2$. Each lateral face: $\frac{1}{2} \times 6 \times 5 = 15 \text{ in}^2$. Four faces: $4 \times 15 = 60 \text{ in}^2$. SA = $36 + 60 = 96 \text{ in}^2$. Surface area uses square units (in^2).*

Writing (TWR) — what to look for

- **Kernel sentence:** A complete sentence needs a subject and a verb. Example: Pyramid is a solid with a flat bottom and triangle sides that meet at one point on top.
- **Expansion:** *because* gives a reason, *but* shows a contrast or exception, *so* shows a result. Answers vary; each must keep the kernel idea and add the correct kind of detail.
- **Sentence types:** Statement ends with a period, question with "?", exclamation with "!", and a command starts with an action verb (a "bossy" verb).
