Unit 2 Vocabulary Retrieval Guide

Use the existing bilingual vocabulary cards with their diagrams. Study-card use: retrieve the meaning without looking, draw an example and nonexample, then explain which feature distinguishes them. Word-wall use needs a larger display size; do not claim the study-card print is readable across a room.

Lesson 2.1

Retrieve: statistical question, variability, data, dot plot, symmetric, skewed, most common value.

Explain with the lesson model: The question is statistical because the values of ___ may ___.

Lesson 2.2

Retrieve: histogram, interval, frequency, peak, symmetric, skewed right, skewed left.

Explain with the lesson model: The value ___ belongs in ___ because its lower bound is ___ and its upper bound is ___.

Lesson 2.3

Retrieve: median, data set, order, middle values, average.

Explain with the lesson model: After ordering all ___ observations, the middle value is ___ because ___.

Lesson 2.4

Retrieve: box plot, quartile, five-number summary, center, spread, consistent.

Explain with the lesson model: I used ___ as the overall median; the lower half is ___, so Q1 is ___.

Lesson 2.5

Retrieve: range, interquartile range (IQR), variability, consistent, IQR.

Explain with the lesson model: The IQR changed from ___ to ___ because Q3 ___. This shows that ___.

Lesson 2.6

Retrieve: outlier, median, mean, center, spread, distribution.

Explain with the lesson model: For the purpose of ___, I use ___ because the change in the extreme value ___.

Lesson 2.7

Retrieve: dividend, divisor, quotient, annex a zero, equivalent division, power of ten.

Explain with the lesson model: I divided ___ tenths into ___ groups, so each group has ___ tenths, or ___.

Lesson 2.8

Retrieve: mean, average, measure of center, data set, target mean, target total, missing value.

Explain with the lesson model: The mean is ___ per group because ___ objects are shared among ___ groups.

Lesson 2.9

Retrieve: mean absolute deviation, deviation, absolute value, spread, variation, consistent.

Explain with the lesson model: The MAD is ___ because the total distance ___ is divided by ___. It describes ___.

Lesson 2.10

Retrieve: outlier, skewed, symmetric, measure of center, mean and MAD, median and IQR.

Explain with the lesson model: For ___ I choose the ___, because ___. For a different purpose, ___ could be useful.

Spanish terms are vocabulary access supports, not a complete Spanish edition. A proficient bilingual review is still required before claiming independently verified translation quality.
