Fundraiser Goals

The art club needs $240 for supplies. So far it has raised 35% of its goal.

ANSWERS

worked anchor

Part A. (4.4 S1, DOK 2) a. $84 (10% = $24, 5% = $12; 30% + 5% = $72 + $12) b. $240 − $84 = $156

Part B. (4.3 S2, DOK 2) About $80: 35% is close to 1/3, and 1/3 of $240 = $80. $84 is close, so it is reasonable.

Part C. (4.4 S1, DOK 3) 16 tickets. $156 ÷ $10 = 15.6. 15 tickets raise $150 (still $6 short), so the club must sell 16.

Part D. (4.5 / 4.4 S2, DOK 3) a. $200 (45% = $90 so 5% = $10 so 100% = $200) b. Music club: it has 45% of its goal; the art club has 35%.

RUBRIC

score the whole task 0–4

4	All parts correct with labeled models or equations; Part C rounds up and says why 15 is not enough; Part D compares percents, not dollars.
3	One calculation slip, but every method and explanation is sound.
2	Parts A and D(a) correct, but Part C is not rounded up or Part D compares dollars ($84 vs $90).
1	Some correct percent work (for example 10% of $240) but a model or interpretation error.
0	No interpretable evidence yet: interview the student or offer a drawing response.

SAMPLE RESPONSES

what each score looks like

Full (4)	35% of 240: 10% = 24, 30% = 72, 5% = 12, so 84. Needs 156. 156 ÷ 10 = 15.6 so 16 tickets because 15 tickets only make 150. Music goal: 90 ÷ 0.45 = 200. Music is closer: 45% > 35%.
Partial (2)	Raised $84, needs $156, 15.6 tickets. Music goal $200. The music club is closer because $90 > $84. so Did not round up; compared dollars instead of percents.
Misconception (1)	35% of 240 = 240 − 35 = 205. so Subtracts the percent as dollars: reteach with the percent bar (Lesson 4.4 Session 1).
