Unit 5 Word Wall & Study Cards

Cut on the dashed lines. Use for a word wall, partner quizzing, or a ring of study cards.

LESSON 5-1

parallelogram

paralelogramo

A four-sided shape whose opposite sides are parallel.

Example opposite sides never meet

Cover the definition. Explain how the picture shows this word.

LESSON 5-1

base

base

The side you measure the height from.

Example b in A = b × h

Cover the definition. Explain how the picture shows this word.

LESSON 5-1

height

altura

The distance from the base to the opposite side, at a square corner.

Example h in A = b × h

Cover the definition. Explain how the picture shows this word.

LESSON 5-1

rhombus

rombo

A parallelogram with four sides of the same length.

Example all 4 sides equal

LESSON 5-1

diagonal

diagonal

A segment from one corner to the opposite corner.

Example a rhombus has 2 diagonals

LESSON 5-1

congruent

congruente

Exactly the same size and shape.

Example 4 congruent sides

LESSON 5-2

right triangle

triángulo rectángulo

A triangle with one square corner.

Example its two legs are b and h

LESSON 5-2

area

área

The space inside a shape, measured in square units.

Example 40 cm^2

LESSON 5-2

formula

fórmula

A rule written with letters and symbols.

Example $A = \frac{1}{2} \times b \times h$

LESSON 5-2

inverse operation

operación inversa

An operation that undoes another.

Example doubling undoes taking half

LESSON 5-3

trapezoid

trapecio

A quadrilateral with one pair of parallel sides (the bases).

Example bases 6 cm and 14 cm

LESSON 5-3

decompose

descomponer

To break a shape into smaller shapes you know.

Example rectangle + 2 triangles

LESSON 5-3

right trapezoid

trapecio rectángulo

A trapezoid with two right angles.

Example its straight side is the height

LESSON 5-4

regular polygon

polígono regular

All sides equal and all angles equal.

Example stop sign, hexagon tile

LESSON 5-4

apothem

apotema

Distance from the center to the middle of a side.

Example height of a center triangle

LESSON 5-4

composite figure

figura compuesta

A shape made of two or more simpler shapes.

Example rectangle + triangle

LESSON 5-4

subtract

restar

To take away the area of a piece that is cut out.

Example wall − window

LESSON 5-5

volume

volumen

The amount of space inside a solid.

Example $V = l \times w \times h$

LESSON 5-5

unit cube

cubo unitario

A cube with every edge 1 unit long.

Example 1 cm^3

LESSON 5-5

base area

área de la base

The area of the bottom face of a prism.

Example $B = l \times w$

LESSON 5-5

cubic units

unidades cúbicas

Units used to measure volume.

Example cm^3, in^3, ft^3

LESSON 5-5

edge

arista

A segment where two faces of a solid meet.

Example length, width, height

LESSON 5-5

inverse operations

operaciones inversas

Operations that undo each other.

Example ÷ undoes ×

LESSON 5-6

net

plantilla

A flat pattern that folds into a solid.

Example an unfolded box

LESSON 5-6

face

cara

One flat side of a solid.

Example a cube has 6 faces

LESSON 5-6

prism

prisma

A solid with two matching bases joined by rectangles.

Example a box, a tent

LESSON 5-6

pyramid

pirámide

A solid with one base and triangle faces that meet at a point.

Example square base + 4 triangles

LESSON 5-6

vertex

vértice

A corner where edges meet.

Example a cube has 8 vertices

LESSON 5-7

surface area

área superficial

The total area of all the faces of a solid.

Example add every face

LESSON 5-7

triangular prism

prisma triangular

A solid with 2 triangle bases and 3 rectangle faces.

Example a tent shape

LESSON 5-7

lateral face

cara lateral

A side face that is not a base.

Example the 3 rectangles

LESSON 5-8

slant height

altura inclinada

The height of a side triangle, measured along its face.

Example ½ × base × slant height

LESSON 5-8

apex

ápice

The top point where the side faces meet.

Example tip of the pyramid

LESSON 5-8

lateral area

área lateral

The area of the slanted faces only.

Example the base is left out
