Unit 6 Word Wall & Study Cards

Cut on the dashed lines. Use for a word wall, partner quizzing, or a ring of study cards.

LESSON 6-1

unit fraction

fracción unitaria

A fraction with 1 as its numerator.

Example 1/3, 1/8, 1/10

4 × 1/4 = 1

Cover the definition. Explain how the picture shows this word.

LESSON 6-1

reciprocal

recíproco

The number you multiply by to get a product of 1.

Example 1/4 and 4: 1/4 × 4 = 1

4 × 1/4 = 1

Cover the definition. Explain how the picture shows this word.

LESSON 6-1

quotient

cociente

The answer to a division problem.

Example In 8 ÷ 1/2 = 16, 16 is the quotient

LESSON 6-1

multiplicative inverse

inverso multiplicativo

Another name for the reciprocal.

Example 2/3 and 3/2

4 × 1/4 = 1

Cover the definition. Explain how the picture shows this word.

LESSON 6-1

divisor

divisor

The number you divide by.

Example In 3/4 ÷ 2, the divisor is 2

LESSON 6-2

dividend

dividendo

The amount you start with and split into groups.

Example In 8/9 ÷ 2/9, 8/9 is the dividend

LESSON 6-2

mixed number

número mixto

A whole number and a fraction written together.

Example 2 1/2

LESSON 6-2

improper fraction

fracción impropia

A fraction whose numerator is greater than or equal to its denominator.

Example 5/2

LESSON 6-2

simplify

simplificar

Write the same amount using smaller numbers.

Example 28/14 = 2

LESSON 6-3

power

potencia

A short way to write the same factor multiplied again and again.

Example 9^4

LESSON 6-3

base

base

The number that is repeated as a factor.

Example In 9^4, the base is 9

LESSON 6-3

exponent

exponente

The raised number that tells how many times the base is a factor.

Example In 9^4, the exponent is 4

LESSON 6-3

evaluate

evaluar

Find the one number an expression equals.

Example $2^3 = 8$

LESSON 6-3

squared

al cuadrado

To the 2nd power; use the base as a factor 2 times.

Example $4^2 = 4 \times 4 = 16$

LESSON 6-3

cubed

al cubo

To the 3rd power; use the base as a factor 3 times.

Example $4^3 = 4 \times 4 \times 4 = 64$

LESSON 6-4

numerical expression

expresión numérica

Numbers and operations with no equal sign.

Example $4 \times 9 + 3$

LESSON 6-4

product

producto

The answer when you multiply.

Example the product of 6 and 7 is 6×7

LESSON 6-4

order of operations

orden de las operaciones

The rules for which step to do first, next and last.

Example ( ), powers, × ÷, + −

LESSON 6-4

grouping symbols

símbolos de agrupación

Parentheses or brackets; do the work inside them first.

Example (9 − 7)

LESSON 6-4

left to right

de izquierda a derecha

Do partner steps (× and ÷, or + and −) in the order they appear.

Example 24 ÷ 4 × 2 = 6 × 2 = 12

LESSON 6-5

variable

variable

A letter that stands for an unknown number.

Example the m in 14m + 35

LESSON 6-5

coefficient

coeficiente

The number multiplied by the variable.

Example In 14m, the coefficient is 14

LESSON 6-5

constant

constante

A number by itself that does not change.

Example the 35 in 14m + 35

LESSON 6-5

algebraic expression

expresión algebraica

An expression with at least one variable.

Example 14m + 35

LESSON 6-5

substitute

sustituir

Replace a variable with a given number.

Example If b = 7: 6b = 6 × 7

LESSON 6-6

like terms

términos semejantes

Terms with the same variable part.

Example 7c and 6c

LESSON 6-6

combine

combinar

Add or subtract like terms into one term.

Example 7c + 6c = 13c

LESSON 6-6

equivalent expressions

expresiones equivalentes

Expressions that have the same value for every number.

Example 7c + 9 + 6c and 13c + 9

LESSON 6-6

counterexample

contraejemplo

One test value that shows a claim is wrong.

Example x = 1: 2x + 8 = 10, 4x = 4

LESSON 6-6

Distributive Property

propiedad distributiva

Multiply the number outside by each term inside the parentheses.

Example 4(n + 3) = 4n + 12

LESSON 6-6

Commutative Property

propiedad conmutativa

You can change the order when you add or multiply.

Example a + b = b + a

LESSON 6-7

factor

factor

A whole number that divides another number with no remainder.

Example 1, 2, 4, 8, 16 all divide 16

LESSON 6-7

common factor

factor común

A factor that two numbers share.

Example 4 is a factor of 16 and of 24

LESSON 6-7

greatest common factor (GCF)

máximo común divisor

The greatest factor that two numbers share.

Example GCF of 16 and 24 is 8

LESSON 6-7

prime factorization

factorización prima

A number written as a product of prime numbers.

Example 24 = 2 × 2 × 2 × 3

LESSON 6-7

multiple

múltiplo

A number you land on when you skip-count by another number.

Example 6, 12, 18, 24

LESSON 6-7

common multiple

múltiplo común

A number that is a multiple of both numbers.

Example 18 is a multiple of 6 and of 9

LESSON 6-7

least common multiple (LCM)

mínimo común múltiplo

The smallest number above 0 that is a multiple of both.

Example LCM of 6 and 9 is 18

LESSON 6-8

Associative Property

propiedad asociativa

Changing the grouping when adding or multiplying does not change the answer.

Example $(a + b) + c = a + (b + c)$

LESSON 6-8

expand

desarrollar

Multiply to remove the parentheses.

Example $6(3x + 4) = 18x + 24$

LESSON 6-8

factor an expression

factorizar una expresión

Write it as a product: a shared factor times a sum.

Example $18x + 24 = 6(3x + 4)$

LESSON 6-8

term

término

One part of an expression, separated by + or − signs.

Example 18x and 24 are terms

LESSON 6-8

greatest common factor

máximo común divisor

The biggest number that divides both numbers evenly.

Example GCF of 18 and 24 is 6
