Unit 8 Word Wall & Study Cards

Cut on the dashed lines. Use for a word wall, partner quizzing, or a ring of study cards.

LESSON 8-1

equation

ecuación

A math sentence that says two amounts are equal.

Example x + 3 = 10

x + 3 = 10	x = 7 makes it true
7 + 3 = 10	x = 6: 9 ≠ 10

Cover the definition. Explain how the picture shows this word.

LESSON 8-1

variable

variable

A letter that stands for an unknown number.

Example the x in x + 3 = 10

x + 3 = 10	x = 7 makes it true
7 + 3 = 10	x = 6: 9 ≠ 10

Cover the definition. Explain how the picture shows this word.

LESSON 8-1

solution

solución

A value that makes the equation true.

Example x = 7

x + 3 = 10	x = 7 makes it true
7 + 3 = 10	x = 6: 9 ≠ 10

Cover the definition. Explain how the picture shows this word.

LESSON 8-1

substitute

sustituir

Replace the variable with a number.

Example put 7 in place of x

x + 3 = 10	x = 7 makes it true
7 + 3 = 10	x = 6: 9 ≠ 10

Cover the definition. Explain how the picture shows this word.

LESSON 8-1

increased by

aumentado en

Means add.

Example n + 9

LESSON 8-1

decreased by

disminuido en

Means subtract.

Example n − 9

LESSON 8-2

inverse operations

operaciones inversas

Two operations that undo each other.

Example + and −

LESSON 8-2

isolate

aislar

Get the variable alone on one side.

Example y = 26

LESSON 8-2

Subtraction Property of Equality

propiedad de sustracción de la igualdad

Subtract the same number from both sides. They stay equal.

Example both sides − 14

LESSON 8-2

Addition Property of Equality

propiedad de suma de la igualdad

Add the same number to both sides. They stay equal.

Example both sides + 9

LESSON 8-2

difference

diferencia

The answer when you subtract.

Example in m − 9 = 14, it is 14

LESSON 8-3

coefficient

coeficiente

The number that multiplies the variable.

Example the 3 in 3x

LESSON 8-3

Division Property of Equality

propiedad de división de la igualdad

Divide both sides by the same number (not zero). They stay equal.

Example both sides ÷ 3

LESSON 8-3

divisor

divisor

The number you divide by.

Example the 4 in n ÷ 4

LESSON 8-3

Multiplication Property of Equality

propiedad de multiplicación de la igualdad

Multiply both sides by the same number. They stay equal.

Example both sides × 4

LESSON 8-3

equal groups

grupos iguales

Groups that each have the same amount.

Example 24 is 4 groups of 6

LESSON 8-4

inequality

desigualdad

A math sentence that compares using <, >, ≤ or ≥.

Example $x \geq 18$

LESSON 8-4

at least

al menos

That number or more (≥).

Example at least 5: $x \geq 5$

LESSON 8-4

at most

a lo sumo

That number or less (≤).

Example at most 8: $x \leq 8$

LESSON 8-4

more than

más que

Greater than the number, not equal to it (>).

Example more than 5: $x > 5$

LESSON 8-4

open circle

círculo abierto

The boundary is not a solution (< or >).

Example $x > 3$: open circle at 3

LESSON 8-4

closed circle

círculo cerrado

The boundary is a solution (≤ or ≥).

Example $x \leq 3$: closed circle at 3

LESSON 8-4

solutions of an inequality

soluciones de una desigualdad

All the numbers that make it true.

Example $x > 3$: 3.5, 4, 10, …

LESSON 8-5

boundary point

punto límite

The number where the solutions start or stop.

Example the 8 in $x \geq 8$

LESSON 8-5

solution set

conjunto solución

All the numbers that make an inequality true.

Example $x \geq 8$: 8, 9.5, 20, …

LESSON 8-5

true statement

enunciado verdadero

A comparison that is correct.

Example $9 > 5$
