Warm-Up Answer Key

Two-variable Relationships

LESSON 9-1 · EXPLORE RELATIONSHIPS BETWEEN TWO VARIABLES

MOVE *Complete a table of values from a rule*
SLIDE 1) 15 2) 8, 9, 10 3) $14 4) hours worked
MODEL 2 4 6

1. 5, 10, 15	**5.** 60, 150, 240
2. 8, 12, 20	**6.** 3, 9, 13
3. 6, 9, 15	**7.** 7
4. 40, 70, 120	**8.** y = 2x; $12

DROPPED *skill 4 — naming the chosen quantity and the one that responds is Session 1 of this lesson, not a skill it assumes; it stays on the slide as a diagnostic box but is not rehearsed on the worksheet*

LESSON 9-2 · ANALYZE GRAPHS OF RELATIONSHIPS BETWEEN TWO VARIABLES

MOVE *Read what one step on an axis is worth / Name the point as an ordered pair*
SLIDE 1) (3, 8) 2) (5, 2) 3) 10 4) (4, 16)
MODEL 10 12 10

1. (8, 6)	**5.** (1, 4), (2, 8), (3, 12)
2. (15, 40)	**6.** (4, 20)
3. 25	**7.** (10, 30)
4. (6, 0)	**8.** x; (4, 12)

LESSON 9-3 · WRITE EQUATIONS TO REPRESENT RELATIONSHIPS BETWEEN TWO VARIABLES

MOVE *Find the factor from a table, then write y = (factor)x*
SLIDE 1) $4 2) 5 3) 5n 4) yes
MODEL 3 3 3

1. 5	**5.** 1/2 x
2. 7	**6.** 6x
3. 4	**7.** 7
4. 10	**8.** yes; 5x

LESSON 9-4 · APPLY TWO-VARIABLE RELATIONSHIPS TO SOLVE PROBLEMS

MOVE *Use y = (rate)x in both directions*
SLIDE 1) 24 2) 9 3) 9 4) $24
MODEL 21 8 8

1. 27	**5.** $9.00
2. 12	**6.** 8 apples
3. 60	**7.** 6 tickets; $2 left over
4. 9	**8.** y = 2x; 15 beads

DROPPED *skill 4 — saying the answer in the situation's units is a labeling habit, not a separate move; every context item here asks for the units in the answer instead of rehearsing it on its own*
