Lesson 3.2 Guided Notes

Session 1 · Understanding Unit Rates

I can find a unit rate and use rate language such as “per hour” or “each.” · 6.RP.A.2

Word / Spanish	Meaning — complete the blank	Example
rate / tasa	A comparison of two amounts with _____ units.	96 pages in 3 hours
unit rate / tasa unitaria	The amount for exactly _____ unit.	32 pages per 1 hour
per / por	Means “for _____” one.	miles per hour
constant rate / tasa constante	The amount stays the _____ every time.	15 pages every minute

Key idea

To find a unit rate, _____ the first amount by the second.

Multiply the unit rate by any number of units to _____.

Always label the _____: miles per hour, dollars per pound.

Worked example

A printer prints 90 pages in 6 minutes at a steady rate. How many pages in 7 minutes?

Divide to find 1 minute: 90 ÷ 6 = _____ pages per minute.

Multiply for 7 minutes: 15 × 7 = _____.

Check: 15 × 6 = _____.

Answer: _____ pages in 7 minutes

You try

1. Find each unit rate.
a. 84 words in 7 minutes _____ per min
b. $56 for 8 hours _____ per hour

_____

2. A car travels 150 miles in 3 hours at a steady speed. How far does it go in 5 hours?

_____

Sum it up: A unit rate tells the amount for ___ because ___.

_____

Session 2 · Comparing Unit Prices (Best Buy)

I can compare unit prices to decide which package is the better buy. · 6.RP.A.2

Word / Spanish	Meaning — complete the blank	Example
unit price / precio unitario	The cost of exactly _____ item or unit.	$1.75 per pound
better buy / mejor compra	The choice with the _____ unit price.	$1.60 < $1.75
total price / precio total	What the _____ package costs.	$9.60 for the bag

Key idea

Unit price = total cost ÷ number of _____.

Find the unit price of _____ package, then compare.

The _____ unit price is the better buy.

Worked example

Store A sells 5 notebooks for $7.50. Store B sells 8 for $10.40. Which is the better buy?

A: $7.50 ÷ 5 = $_____ per notebook.

B: $10.40 ÷ 8 = $_____ per notebook.

$1.30 < $1.50, so Store _____ is cheaper.

Answer: Store B saves $_____ per notebook.

You try

1. Find each unit price.
a. 6 apples for $4.50 _____ each
b. 10 pencils for $2.50 _____ each

_____

2. A 12-oz bottle costs $2.40. A 20-oz bottle costs $3.60. Which is the better buy?

_____

Sum it up: To pick the better buy, I compare ___ because ___.

_____

Session 1 · Model, reason, and explain

Understanding Unit Rates · 6.RP.A.2

Success: represent the quantities, justify the relationship, and check the result with the correct units.

A printer makes 84 pages in 6 minutes at a steady rate. Find pages per minute and minutes per page. Which rate directly answers how many pages it makes in 5 minutes?

Minutes	Pages
6	84
1	?
5	?

_____

_____

_____

Extend your reasoning

When would minutes per page be useful?

_____

_____

Self-check: Did my model, calculation, explanation, and units agree?

Session 2 · Model, reason, and explain

Comparing Unit Prices (Best Buy) · 6.RP.A.2

Success: represent the quantities, justify the relationship, and check the result with the correct units.

Pack A contains 6 notebooks for $9.30. Pack B contains 8 for $12. Compare cost per notebook without rounding until the comparison is made. Which has the lower unit price?

Pack	Notebooks	Price
A	6	$9.30
B	8	$12.00

_____

_____

_____

Extend your reasoning

If you need exactly 6 notebooks and can buy only whole packs, does the lower unit price guarantee a lower checkout cost?

_____

_____

Self-check: Did my model, calculation, explanation, and units agree?
