Name_____ Date_____ Period_____

LESSON 3-2 · HOMEWORK PACKET · SHEET 1 OF 2

Understanding Unit Rates

Maryland Standard 6.RP.A.2 · Learning target – I can find a unit rate and use rate language such as "per hour" or "each."

REMEMBER

- A **rate** compares two quantities with different units, like 150 miles in 3 hours.
- A **unit rate** is the amount for **1** unit. Divide the first amount by the second.
- Use rate words: **per**, **each**, **for every 1**. Always label the units.

WORKED EXAMPLE

A printer prints 72 pages in 4 minutes. Find the pages per minute.

Step 1 Write the rate: 72 pages for 4 minutes

Step 2 Divide: 72 ÷ 4 = 18

Answer **18 pages per minute**

PRACTICE

show your work · label units

1. Find each unit rate.

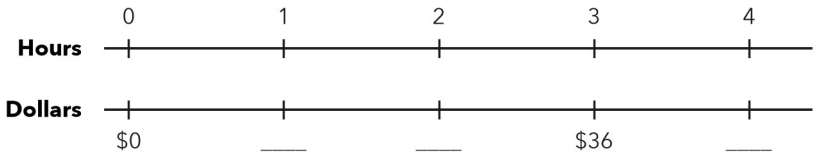

a. 135 miles in 3 hours ____ mi per hour

b. $48 for 6 tickets ____ per ticket

c. 280 words in 4 minutes ____ words per min

d. 84 apples in 7 bags ____ apples per bag

2. Dog Walking. Jaylen earns the same amount each hour. Complete the double number line. Then write the unit rate.

Unit rate_____

3. Smoothie Stand. A smoothie stand sells 156 smoothies in 6 hours at a steady pace. Find the unit rate. At this rate, how many smoothies does it sell in 9 hours?

Show your work.

Answer_____

4. Two Unit Rates. A baker uses 12 cups of flour for 4 loaves of bread.

a. How many cups of flour per loaf? _____ cups per loaf

b. How many loaves per cup of flour? _____ loaf per cup

5. Find the Error. Ivy types 150 words in 3 minutes. Ben wrote 3 ÷ 150 = 0.02 words per minute. Explain his mistake and find the correct unit rate.

_____

_____

CHECK YOURSELF ☐ I can do this on my own ☐ I need a little help ☐ I have a question about #___

AT HOME Find a rate on a label or sign at home (miles per hour, cost per pound). Say what "per" means.

LESSON 3-2 · HOMEWORK PACKET · SHEET 2 OF 2

Comparing Unit Prices (Best Buy)

Maryland Standard 6.RP.A.2 · Learning target – I can compare unit prices to decide which package is the better buy.

REMEMBER

- **Unit price** = total cost ÷ number of units.
- The **lower** unit price is the **better buy**.

WORKED EXAMPLE

Pack A has 6 granola bars for $4.20. Pack B has 10 bars for $6.50. Which is the better buy?

Step 1 A: $4.20 ÷ 6 = $0.70 per bar

Step 2 B: $6.50 ÷ 10 = $0.65 per bar

Answer **$0.65 < $0.70, so Pack B is the better buy.**

PRACTICE

show your work · label units

1. Find each unit price.

a. 5 lb of rice for $7.50 ____ per lb

b. 8 juice boxes for $4.00 ____ per box

2. Complete the table. Circle the better buy.

	Price	Size	Unit price (per oz)
Small box	$3.60	12 oz	
Large box	$5.04	18 oz	

3. **Paint.** A 2-gallon can of paint costs $46. A 5-gallon bucket costs $107.50.

a. Unit price of the can: _____ per gallon

b. Unit price of the bucket: _____ per gallon

c. How much do you save on each gallon with the bucket? _____ per gallon

4. **Notebooks.** Store A sells 4 notebooks for $5.00. Store B sells 6 notebooks for $7.80.

a. Unit price: Store A ____ per notebook Store B ____ per notebook

b. Which store has the better buy? _____

5. **Reasoning.** Carmen says a 32-oz jar for $5.12 is a better buy than a 16-oz jar for $2.40 because bigger is cheaper. Is she right? Explain.

_____

_____

TEST PRACTICE

choose the best answer

6. Which bag of apples is the best buy?

A 3 lb for $4.50 **B** 5 lb for $7.00 **C** 2 lb for $3.20 **D** 4 lb for $6.40

7. A pack of 12 water bottles costs $5.40. What is the price per bottle?

A $0.45 **B** $2.22 **C** $4.50 **D** $64.80

CHECK YOURSELF ☐ I can do this on my own ☐ I need a little help ☐ I have a question about #___

AT HOME Compare two sizes of the same item at home or in a store ad. Which is the better buy?
