Lesson 3.2 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Understanding Unit Rates · I can find a unit rate and use rate language such as “per hour” or “each.”

S2: Comparing Unit Prices (Best Buy) · I can compare unit prices to decide which package is the better buy.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Understanding Unit Rates

I can find a unit rate and use rate language such as “per hour” or “each.” · 6.RP.A.2

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 45 miles per hour b. $8 each	Write the requested compound unit first; put the quantity named first in the numerator.
2	315 ÷ 7 = 45 per minute; 45 × 20 = 900 bottles	Write the requested compound unit first; put the quantity named first in the numerator.
3	B — 60 miles per hour	Ask the learner to show why B — 60 miles per hour is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Divides in the opposite order without changing the meaning of the unit..

Response: Write the requested compound unit first; put the quantity named first in the numerator.

Also check: Multiplying instead of dividing to find a unit rate (45 miles in 3 hours written as 135).

Also check: Dividing in the wrong order, so the rate is for the wrong unit (7 ÷ 84 instead of 84 ÷ 7 for words per minute).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A machine makes 72 labels in 8 minutes. Find labels per minute and the number in 3 minutes.

Teacher solution: 9 labels/minute; 27 labels.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 14 pages/minute and 1/14 minute/page. Use 14 pages/minute: 5 × 14 = 70 pages. Reciprocal rates have different meanings and units.

Misconception response anchor: Divides in the opposite order without changing the meaning of the unit.. Use write the requested compound unit first; put the quantity named first in the numerator.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: I need ___ per ___, so I divide ___ by ___.

Session 2 · Comparing Unit Prices (Best Buy)

I can compare unit prices to decide which package is the better buy. · 6.RP.A.2

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. $1.50 per lb b. $0.50 each	Reduce each package to the cost of one item, retaining dollars per item.
2	A: $0.70 per bar; B: $0.65 per bar; Pack B	Reduce each package to the cost of one item, retaining dollars per item.
3	B — The price per ounce of each jar	Ask the learner to show why B — The price per ounce of each jar is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Chooses the lower package price without matching quantities..

Response: Reduce each package to the cost of one item, retaining dollars per item.

Also check: Choosing the package with the lower total price instead of the lower unit price.

Also check: Assuming the bigger package is always the better buy.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Compare 4 pens for $3.20 with 6 pens for $4.50. Give both unit prices.

Teacher solution: $0.80 and $0.75 per pen; the six-pack has the lower unit price.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: A: $1.55/notebook; B: $1.50/notebook. B is lower by $0.05 per notebook.

Misconception response anchor: Chooses the lower package price without matching quantities.. Use reduce each package to the cost of one item, retaining dollars per item.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: Pack ___ is cheaper per notebook because ___ is less than ___.
