Teach, Check, Respond

Session 1 — Percent Means Per Hundred · Session 2 — Percents Greater Than 100% · Maryland 6.AT.4

LESSON ROUTE

about 45 minutes per session

Warm up · 5 min	Warm-Up page (Session 1). Note who needs the prerequisite sheet.
Launch · 7 min	Slides: name the target. Students predict an answer to the Model, Reason, Explain task.
Model · 10 min	Guided Notes page for the session. Draw the deck's model next to the worked example.
Practice · 18 min	Practice Form A: core #1, #2, #4, #6 and Find the Error. Add more from what you see.
Check · 5 min	Exit Ticket. Sort into got it / almost / need help with the table below.

Shorter period: keep the model and the exit ticket; trim practice. Form B is for reteach or retake, so keep it unseen until then.

SESSION 1 · PERCENT MEANS PER HUNDRED *I can write a ratio as a percent by finding the equivalent ratio out of 100.*

EXIT TICKET – WHAT TO LOOK FOR AND WHAT TO SAY NEXT

#	Expected answer	Next prompt if it is not there yet
1	a. 80% b. 38%	Write 7 out of 10 and 12 out of 50 as percents.
2	a. 6 × 4 = 24, so 24% b. 100% − 24% = 76%	In a class, 9 out of 25 students bike to school. What percent bike? What percent do not bike?
3	**C** (60%)	Which percent is the same as 2 out of 5? Explain how you know.

THE ERROR TO WATCH FOR

Uses the part as the percent when the whole is not 100 (writes 9 of 12 as 9%).

Reteach Label the full bar 100% and the total count first, then split it into equal parts and name the percent of one part.

- Writing the part as the percent when the whole is not 100 (11 out of 25 = 11%).
- Adding to reach 100 (11 + 80 out of 20 + 80) instead of multiplying both terms.

Calculation slip only: use Session 1 Prerequisite Practice A, then go back to the model. Wrong whole or wrong model: label the whole (100%) before redoing the arithmetic.

FRESH CHECK – GIVE AFTER RETEACHING (STUDENTS HAVE NOT SEEN IT)

Check	A soccer team won 12 of its 15 games. What percent of its games did it win? Name the whole.
Answer	The whole is 15 games (100%). 12 out of 15 = 4 out of 5 = 80 out of 100, so 80%.

SCORE THE CHECK

3	Model fits the numbers, correct answer with units, explanation matches. Move on; remove a support next time.
2	Right setup with a small slip, or a thin explanation. Quick feedback, then one more new problem.
1	Some correct facts, but the wrong whole or model. Reteach with the session's model and the prerequisite page.
0	Not enough to tell yet. Ask the student to point, draw or say it before writing.

LANGUAGE ACCESS

Point and draw, then say it with a partner ("Partner A: "The whole is ___ challenges, so each part is ___%." Partner B: "9 challenges fill ___ parts, so the team finished ___%.""), then write one sentence (Explain Your Thinking sheet), then explain alone. Fade one support each time.

SESSION 2 · PERCENTS GREATER THAN 100%

I can use percents greater than 100% to describe an amount larger than the whole.

EXIT TICKET – WHAT TO LOOK FOR AND WHAT TO SAY NEXT

#	Expected answer	Next prompt if it is not there yet
1	a. 450% b. 125%	Write 3.5 times as much and 1.75 times as much as percents.
2	36 ÷ 24 = 1.5, so 150%	A team scored 30 points in game 1 (the whole) and 48 points in game 2. Game 2 is what percent of game 1?
3	**A** (30)	Which number is 300% of 12? Explain how you know.

THE ERROR TO WATCH FOR

Thinks a percent can never be more than 100%, or writes the amount as the percent (writes 14 ounces as 14%).

Reteach Draw one bar for the whole labeled 100%, add a second whole bar ending at 200%, and have students shade the new amount across both bars.

- Using the wrong amount as the whole (Monday as a percent of Tuesday instead of Tuesday of Monday).
- Writing the amount itself as the percent (16 kg is 16%).

Calculation slip only: use Session 2 Prerequisite Practice A, then go back to the model. Wrong whole or wrong model: label the whole (100%) before redoing the arithmetic.

FRESH CHECK – GIVE AFTER RETEACHING (STUDENTS HAVE NOT SEEN IT)

Check	A food drive collected 60 cans in week 1 and 135 cans in week 2. Week 2 is what percent of week 1? Name the whole.
Answer	The whole is week 1, 60 cans (100%). 135 ÷ 60 = 2.25, so week 2 is 225% of week 1.

SCORE THE CHECK

3	Model fits the numbers, correct answer with units, explanation matches. Move on; remove a support next time.
2	Right setup with a small slip, or a thin explanation. Quick feedback, then one more new problem.
1	Some correct facts, but the wrong whole or model. Reteach with the session's model and the prerequisite page.
0	Not enough to tell yet. Ask the student to point, draw or say it before writing.

LANGUAGE ACCESS

Point and draw, then say it with a partner ("Partner A: "The whole is ___ ounces, so each part is ___%." Partner B: "14 ounces fills ___ parts, so it is ___%, more than 100%.""), then write one sentence (Explain Your Thinking sheet), then explain alone. Fade one support each time.
