Lesson 5.1 Guided Notes

Session 1 · Area of Parallelograms

I can find the area of a parallelogram by multiplying the base by the perpendicular height. · 6.G.A.1

Word / Spanish	Meaning — complete the blank	Example
parallelogram / paralelogramo	A four-sided shape whose opposite sides are _____.	opposite sides never meet
base / base	The side you _____ the height from.	b in A = b × h
height / altura	The distance from the base to the opposite side, at a _____ corner.	h in A = b × h

Key idea

Area of a parallelogram: A = _____ × height.

The height makes a _____ corner with the base. The slanted side is _____ the height.

Missing height or base: _____ the area by the measure you know.

Worked example

A parallelogram has a base of 9 in., a height of 4 in., and a slanted side of 5 in. Find its area.

base = _____ in., height = _____ in.

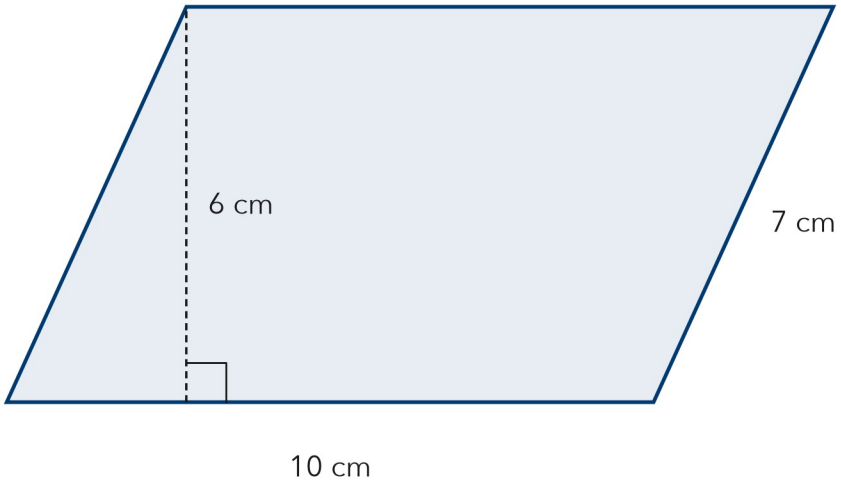

Skip the 5 in. slanted side.

A = 9 × 4 = _____

Answer: The area is _____ in².

You try

1. Find the area.

_____

2. Find the missing measure.
a. A = 42 in², b = 7 in, h = _____ in
b. A = 54 m², h = 6 m, b = _____ m

_____

Sum it up: I do not use the slanted side to find area because ___.

_____

Session 2 · Area of Rhombuses

I can find the area of a rhombus using the base and height or the two diagonals. · 6.G.A.1

Word / Spanish	Meaning — complete the blank	Example
rhombus / rombo	A parallelogram with four sides of the _____ length.	all 4 sides equal
diagonal / diagonal	A segment from one corner to the _____ corner.	a rhombus has 2 diagonals
congruent / congruente	Exactly the same _____ and shape.	4 congruent sides

Key idea

A rhombus is a _____, so A = base × height works.

With the two diagonals, A = d1 × d2 ÷ _____.

Missing diagonal: _____ the area, then divide by the diagonal you know.

Worked example

A rhombus has diagonals of 10 cm and 8 cm. Find its area.

Two diagonals are given, so use A = d1 × d2 ÷ 2.

10 × 8 = _____

80 ÷ 2 = _____

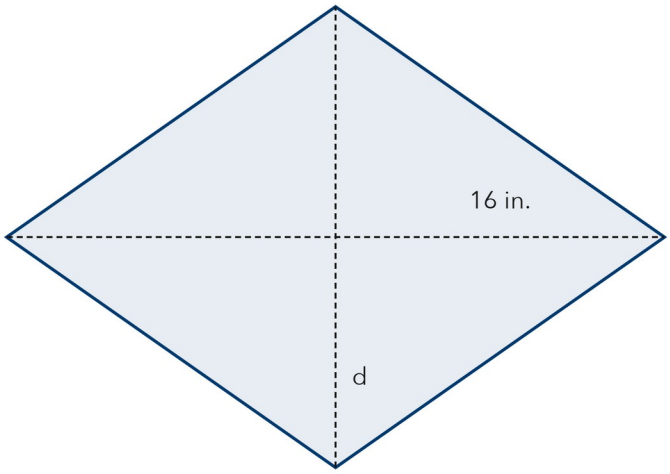

Answer: The area is _____ cm².

You try

1. Find the area of each rhombus.
a. diagonals 6 m and 12 m _____ m²
b. base 7 cm, height 5 cm _____ cm²

_____

2. The rhombus has an area of 72 in². Find the missing diagonal d.

_____

Sum it up: When I use the diagonals, I divide by 2 because ___.

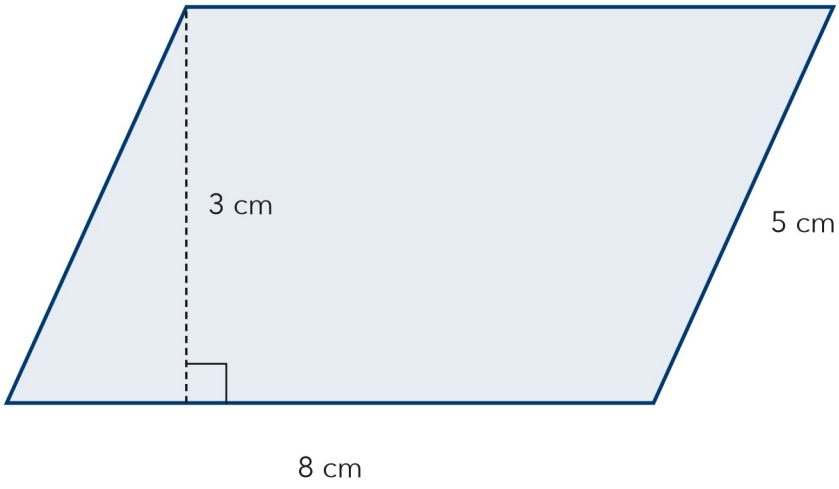

_____

Session 1 · Model, reason, and explain

Area of Parallelograms · 6.G.A.1

Success: represent the quantities, justify the relationship, and check the result with the correct units.

A parallelogram has base 8 cm, perpendicular height 3 cm, and slanted side 5 cm. Sketch a cut-and-slide rearrangement into a rectangle and find its area.

_____

_____

_____

Extend your reasoning

Create a contrasting example that exposes the misconception: uses the slanted side as height.. Explain what changes and what stays true.

_____

_____

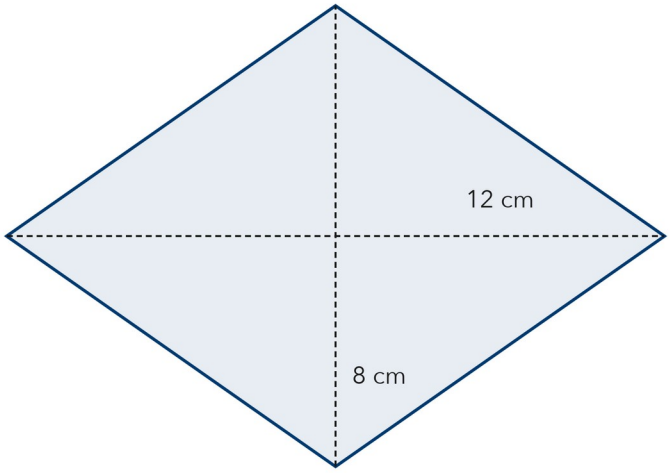

Self-check: Did my model, calculation, explanation, and units agree?

Session 2 · Model, reason, and explain

Area of Rhombuses · 6.G.A.1

Success: represent the quantities, justify the relationship, and check the result with the correct units.

A rhombus has diagonals 12 cm and 8 cm. Split it into four right triangles and explain the diagonal formula.

_____

_____

_____

Extend your reasoning

Create a contrasting example that exposes the misconception: treats diagonals as the base and perpendicular height of a rectangle.. Explain what changes and what stays true.

_____

_____

Self-check: Did my model, calculation, explanation, and units agree?
