Lesson 5.1 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Area of Parallelograms · I can find the area of a parallelogram by multiplying the base by the perpendicular height.

S2: Area of Rhombuses · I can find the area of a rhombus using the base and height or the two diagonals.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Area of Parallelograms

I can find the area of a parallelogram by multiplying the base by the perpendicular height. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 52 in² b. 9 m	Mark a right angle at the height and compare it with the rectangle produced by rearranging.
2	11 × 5 = 55 m²	Mark a right angle at the height and compare it with the rectangle produced by rearranging.
3	B — cm²	Ask the learner to show why B — cm² is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses the slanted side as height..

Response: Mark a right angle at the height and compare it with the rectangle produced by rearranging.

Also check: Multiplying the base by the slanted side instead of the perpendicular height.

Also check: Labeling area in linear units (cm instead of cm²).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A parallelogram has base 11 m, perpendicular height 4 m, side 6 m. Find area and explain the unused measure.

Teacher solution: 44 m²; the 6 m side is not the perpendicular height.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Area 8 × 3 = 24 cm². Rearranging a triangular piece preserves area and makes a rectangle with the same base and perpendicular height; the slanted side is not used.

Misconception response anchor: Uses the slanted side as height.. Use mark a right angle at the height and compare it with the rectangle produced by rearranging.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.

Session 2 · Area of Rhombuses

I can find the area of a rhombus using the base and height or the two diagonals. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 35 ft² b. 63 m²	Label the four half-diagonal triangles and count each region once.
2	(18 × 10) ÷ 2 = 90 cm²	Label the four half-diagonal triangles and count each region once.
3	B — 12 cm (2 × 84 ÷ 14)	Ask the learner to show why B — 12 cm (2 × 84 ÷ 14) is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Treats diagonals as the base and perpendicular height of a rectangle..

Response: Label the four half-diagonal triangles and count each region once.

Also check: Multiplying the diagonals and forgetting to divide by 2.

Also check: Using a slanted side length as the height in A = b × h.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Find a rhombus area with diagonals 10 m and 6 m; explain the factor one-half.

Teacher solution: 30 m²; four half-diagonal right triangles give half the full diagonal product.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Half-diagonals are 6 and 4; each triangle has area 12 cm²; four total 48 cm². This equals 12 × 8 ÷ 2.

Misconception response anchor: Treats diagonals as the base and perpendicular height of a rectangle.. Use label the four half-diagonal triangles and count each region once.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.
