Lesson 5.2 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Area of Triangles · I can find the area of a triangle using one half the base times the height.

S2: Missing Measures in Triangles · I can find a missing base or height of a triangle when I know its area.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Area of Triangles

I can find the area of a triangle using one half the base times the height. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 99 in² b. 14 cm²	Draw the matching triangle and mark the perpendicular height.
2	½ × 9 × 6 = 27 in²	Draw the matching triangle and mark the perpendicular height.
3	B — A = ½ × b × h	Ask the learner to show why B — A = ½ × b × h is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Omits one-half or uses a nonperpendicular side..

Response: Draw the matching triangle and mark the perpendicular height.

Also check: Forgetting to take half (finding the parallelogram's area).

Also check: Using a slanted side as the height.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Find a triangle area with base 9 cm and perpendicular height 4 cm; justify the formula.

Teacher solution: 18 cm²; half of 9 × 4.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Parallelogram area 60 cm²; one triangle 30 cm². Each triangle is half of the parallelogram.

Misconception response anchor: Omits one-half or uses a nonperpendicular side.. Use draw the matching triangle and mark the perpendicular height.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.

Session 2 · Missing Measures in Triangles

I can find a missing base or height of a triangle when I know its area. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 12 cm b. 18 in	Double the known area first, then divide by the known base.
2	2 × 35 = 70; 70 ÷ 10 = 7 ft	Double the known area first, then divide by the known base.
3	B — half as big as it should be	Ask the learner to show why B — half as big as it should be is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Divides area by base without accounting for one-half..

Response: Double the known area first, then divide by the known base.

Also check: Dividing the area by one measure without doubling (66 ÷ 11 = 6).

Also check: Writing a length answer in square units (12 ft²).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A triangle has area 35 m² and base 10 m. Find and check its height.

Teacher solution: 7 m; 1/2 × 10 × 7 = 35 m².

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 36 = 1/2 × 9 × h; h = 72/9 = 8 cm. Check 1/2 × 9 × 8 = 36 cm².

Misconception response anchor: Divides area by base without accounting for one-half.. Use double the known area first, then divide by the known base.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.
