Lesson 5.4 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Area of Regular Polygons · I can find the area of a regular polygon by finding the area of one triangle and multiplying.

S2: Composite Figures · I can find the area of a composite figure by adding or subtracting the areas of simpler shapes.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Area of Regular Polygons

I can find the area of a regular polygon by finding the area of one triangle and multiplying. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 5 b. ½ × 8 × 5 = 20 ft²	Mark a right angle from center to side and carry ≈ through the calculation.
2	One triangle ½ × 10 × 8.7 = 43.5 cm²; 6 × 43.5 ≈ 261 cm²	Mark a right angle from center to side and carry ≈ through the calculation.
3	C — 120 in²	Ask the learner to show why C — 120 in² is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses center-to-vertex length as the apothem or drops approximation notation..

Response: Mark a right angle from center to side and carry ≈ through the calculation.

Also check: Finding the area of only one center triangle and stopping.

Also check: Forgetting the ½ in the triangle area (side × apothem × n).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A regular pentagon has side 8 m and supplied apothem approximately 5.5 m. Estimate area.

Teacher solution: Approximately 110 m²; five triangles each about 22 m².

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: One triangle ≈ 1/2 × 6 × 5.2 = 15.6 cm²; six ≈ 93.6 cm². The apothem is perpendicular to a side and is approximate, so the result is approximate.

Misconception response anchor: Uses center-to-vertex length as the apothem or drops approximation notation.. Use mark a right angle from center to side and carry ≈ through the calculation.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.

Session 2 · Composite Figures

I can find the area of a composite figure by adding or subtracting the areas of simpler shapes. · 6.G.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 50 − 6 = 44 ft² b. 24 + 8 = 32 m²	Shade the part kept and label a nonoverlapping partition before calculating.
2	Rectangle 10 × 6 = 60 ft²; triangle ½ × 10 × 4 = 20 ft²; total 80 ft²	Shade the part kept and label a nonoverlapping partition before calculating.
3	C — 132 ft²	Ask the learner to show why C — 132 ft² is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Adds a removed region or double-counts overlapping pieces..

Response: Shade the part kept and label a nonoverlapping partition before calculating.

Also check: Adding the area of a cut-out (window, vent, notch) instead of subtracting it.

Also check: Forgetting the ½ when a piece is a triangle.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A 10-by-7 m rectangle loses a 3-by-2 m corner. Find remaining area and explain.

Teacher solution: 70 − 6 = 64 m²; account for each region once.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 96 − 12 = 84 cm². One partition: 8 × 8 plus 4 × 5 = 64 + 20 = 84. Accept another labeled nonoverlapping partition.

Misconception response anchor: Adds a removed region or double-counts overlapping pieces.. Use shade the part kept and label a nonoverlapping partition before calculating.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.
