Lesson 5.8 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Surface Area of Pyramids · I can find the surface area of a pyramid by adding the base area and the areas of its triangular faces.

S2: Lateral Area of Pyramids · I can find the lateral area of a pyramid, which covers only its slanted faces.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Surface Area of Pyramids

I can find the surface area of a pyramid by adding the base area and the areas of its triangular faces. · 6.G.A.4

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 81 cm² b. ½ × 9 × 4 = 18 cm²	Mark the height inside the triangular face and its right angle to the base edge.
2	36 + 4 × (½ × 6 × 7) = 36 + 84 = 120 in²	Mark the height inside the triangular face and its right angle to the base edge.
3	A — the slant height	Ask the learner to show why A — the slant height is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses the vertical height for the triangular face area..

Response: Mark the height inside the triangular face and its right angle to the base edge.

Also check: Adding the base and only one triangle.

Also check: Using the pyramid’s straight-up height instead of the slant height.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Base edge 8 m and slant height 6 m: find surface area.

Teacher solution: 64 + 4 × 24 = 160 m².

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Base 36 cm²; each side triangle 15 cm²; four side triangles 60; total 96 cm². Slant height is the perpendicular height within a lateral triangle, not the solid's vertical height.

Misconception response anchor: Uses the vertical height for the triangular face area.. Use mark the height inside the triangular face and its right angle to the base edge.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.

Session 2 · Lateral Area of Pyramids

I can find the lateral area of a pyramid, which covers only its slanted faces. · 6.G.A.4

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 60 cm² b. 100 − 36 = 64 in²	Name each face that is covered before choosing the sum.
2	4 × (½ × 10 × 6) = 4 × 30 = 120 m²	Name each face that is covered before choosing the sum.
3	A — lateral area	Ask the learner to show why A — lateral area is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Includes the base even when the context excludes it..

Response: Name each face that is covered before choosing the sum.

Also check: Adding the base to a lateral area when the base is not covered.

Also check: Using 4 slanted faces for a pyramid with a triangle base (it has 3).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Base edge 10 cm, slant height 7 cm: find lateral and complete surface areas.

Teacher solution: Lateral 140 cm²; complete 240 cm².

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Lateral area 4 × 1/2 × 8 × 5 = 80 m². Complete surface adds base 64, giving 144 m². The roof-covering situation excludes the base.

Misconception response anchor: Includes the base even when the context excludes it.. Use name each face that is covered before choosing the sum.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The relevant faces or regions are ___ because ___. My labeled dimensions show ___, so the measure is ___.
