Lesson 6.1 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Dividing by a Unit Fraction · I can divide a whole number by a unit fraction and explain what the quotient counts.

S2: Dividing a Fraction by a Whole Number · I can divide a fraction by a whole number and explain the result.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Dividing by a Unit Fraction

I can divide a whole number by a unit fraction and explain what the quotient counts. · 6.NS.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 24 b. 18	Count how many small groups fit into each whole before counting the complete amount.
2	5 ÷ 1/3 = 5 × 3 = 15 bracelets	Count how many small groups fit into each whole before counting the complete amount.
3	A — 7 × 5	Ask the learner to show why A — 7 × 5 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Assumes division by a fraction must reduce the number..

Response: Count how many small groups fit into each whole before counting the complete amount.

Also check: Flipping the dividend instead of the divisor (4 ÷ 1/3 written as 1/4 × 1/3 = 1/12).

Also check: Dividing by the denominator (8 ÷ 1/2 = 4): finding half of 8 instead of how many halves are in 8.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

How many 1/4-liter portions fit in 3 liters? Model and check.

Teacher solution: 12 portions; 12 × 1/4 = 3 L.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Each meter holds three thirds, so 4 × 3 = 12 strips. Check 12 × 1/3 = 4 m.

Misconception response anchor: Assumes division by a fraction must reduce the number.. Use count how many small groups fit into each whole before counting the complete amount.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.

Session 2 · Dividing a Fraction by a Whole Number

I can divide a fraction by a whole number and explain the result. · 6.NS.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 1/10 b. 3/7	Label the total and three group slots, then distribute the fractional amount equally.
2	3/4 ÷ 6 = 3/4 × 1/6 = 3/24 = 1/8 L	Label the total and three group slots, then distribute the fractional amount equally.
3	B — 2/9 × 1/4	Ask the learner to show why B — 2/9 × 1/4 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Confuses number of groups with size of a group..

Response: Label the total and three group slots, then distribute the fractional amount equally.

Also check: Multiplying by the whole number instead of its reciprocal (3/4 ÷ 10 written as 3/4 × 10 = 30/4).

Also check: Flipping the fraction instead of the whole-number divisor (3/4 ÷ 3 written as 4/3 × 3).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Share 2/3 kg equally among 4 groups. Find and check a share.

Teacher solution: 1/6 kg; 4 × 1/6 = 2/3.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Each share is 1/4 m; 3/4 ÷ 3 = 3/4 × 1/3 = 1/4. Three shares recreate 3/4 m.

Misconception response anchor: Confuses number of groups with size of a group.. Use label the total and three group slots, then distribute the fractional amount equally.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.
