Lesson 6.3 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Writing Repeated Factors as Powers · I can write repeated multiplication as a power and name its base and exponent.

S2: Finding the Value of a Power · I can find the value of a power by multiplying the base the number of times the exponent shows.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Writing Repeated Factors as Powers

I can write repeated multiplication as a power and name its base and exponent. · 6.EE.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 8^5 b. 0.3^2	Count factors, then expand the power before evaluating.
2	base 9, exponent 6; 9 × 9 × 9 × 9 × 9 × 9	Count factors, then expand the power before evaluating.
3	B — 4^3	Ask the learner to show why B — 4^3 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Multiplies base by exponent..

Response: Count factors, then expand the power before evaluating.

Also check: Switching the base and exponent (4 × 4 × 4 × 4 × 4 written as 5^4).

Also check: Using the number of × signs as the exponent (8 × 8 × 8 written as 8^2).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Write 5 × 5 × 5 as a power and distinguish it from 5 × 3.

Teacher solution: $5^3 = 125$; 5 × 3 = 15.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Repeated factors give $3^4 = 81$. The others both equal 12, but use multiplication and repeated addition rather than four factors of 3.

Misconception response anchor: Multiplies base by exponent.. Use count factors, then expand the power before evaluating.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.

Session 2 · Finding the Value of a Power

I can find the value of a power by multiplying the base the number of times the exponent shows. · 6.EE.A.1

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 25 b. 16	Write every repeated factor for both expressions and compare the products.
2	6 × 6 × 6 = 216 in³	Write every repeated factor for both expressions and compare the products.
3	C — 3^3	Ask the learner to show why C — 3^3 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Treats exponentiation as commutative multiplication..

Response: Write every repeated factor for both expressions and compare the products.

Also check: Multiplying the base by the exponent (10^3 = 30).

Also check: Placing the decimal point wrong in decimal powers (0.6^2 = 3.6 instead of 0.36).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Compare 3^4 with 4^3 using expanded factors.

Teacher solution: 81 versus 64; they are not equal.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: $2^5 = 32$; $5^2 = 25$. No, base and exponent play different roles.

Misconception response anchor: Treats exponentiation as commutative multiplication.. Use write every repeated factor for both expressions and compare the products.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.
