Lesson 6.5 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Writing Algebraic Expressions · I can write an algebraic expression that uses a variable for an unknown amount.

S2: Evaluating Algebraic Expressions · I can evaluate an algebraic expression by substituting a value for the variable.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Writing Algebraic Expressions

I can write an algebraic expression that uses a variable for an unknown amount. · 6.EE.A.2a

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. y − 9 b. 7n	Label repeating and one-time amounts before forming terms.
2	15m + 20	Label repeating and one-time amounts before forming terms.
3	A — 8	Ask the learner to show why A — 8 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Repeats the fixed fee or writes an equation without an equality relationship..

Response: Label repeating and one-time amounts before forming terms.

Also check: Putting the variable with the one-time fee (11 + 6b instead of 11b + 6).

Also check: Adding instead of multiplying for a per-item rate (5 + d instead of 5d).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Write a cost expression for $5 per day plus one $9 fee. Define the variable.

Teacher solution: 5d + 9 dollars, d = days.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 7h + 4 dollars; 7h is hourly cost, 4 is charged once. It is an expression, not an equation, until an equality is stated.

Misconception response anchor: Repeats the fixed fee or writes an equation without an equality relationship.. Use label repeating and one-time amounts before forming terms.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.

Session 2 · Evaluating Algebraic Expressions

I can evaluate an algebraic expression by substituting a value for the variable. · 6.EE.A.2c

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 17 b. 26	Use parentheses for the substituted value and preserve the original operation structure.
2	30 − 4 × 6 = 30 − 24 = 6 L	Use parentheses for the substituted value and preserve the original operation structure.
3	A — 14	Ask the learner to show why A — 14 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Adds before multiplying or treats 6p as 6+p..

Response: Use parentheses for the substituted value and preserve the original operation structure.

Also check: Writing digits side by side after substituting (4x with x = 3 read as 43).

Also check: Adding before multiplying (4 + 2p with p = 5 as 6 × 5 = 30).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Evaluate 8x − 5 for x = 4 and show the substituted expression.

Teacher solution: 8(4) − 5 = 27.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 6(3) + 4 = 18 + 4 = 22. For example, three $6 items plus one $4 fee.

Misconception response anchor: Adds before multiplying or treats 6p as 6+p.. Use use parentheses for the substituted value and preserve the original operation structure.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.
