Lesson 6.7 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Factors and Greatest Common Factor · I can list the factors of two numbers and find their greatest common factor.

S2: Multiples and Least Common Multiple · I can list multiples of two numbers and find their least common multiple.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Factors and Greatest Common Factor

I can list the factors of two numbers and find their greatest common factor. · 6.NS.B.4

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 9 b. 10	Label the common divisor as kit count, then divide both totals by it.
2	4 baskets (4 apples and 7 oranges each)	Label the common divisor as kit count, then divide both totals by it.
3	C — 12	Ask the learner to show why C — 12 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Reports the number of items per kit as the GCF..

Response: Label the common divisor as kit count, then divide both totals by it.

Also check: Choosing a factor of only one number (GCF of 9 and 30 is 9) without checking that it divides both.

Also check: Giving a multiple instead of a factor (confusing GCF with LCM).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Make the greatest identical kits from 18 pencils and 30 markers.

Teacher solution: 6 kits, each 3 pencils and 5 markers.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: GCF 12; 12 kits, each with 2 pencils and 3 markers. Distinguish kit count from items inside a kit.

Misconception response anchor: Reports the number of items per kit as the GCF.. Use label the common divisor as kit count, then divide both totals by it.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.

Session 2 · Multiples and Least Common Multiple

I can list multiples of two numbers and find their least common multiple. · 6.NS.B.4

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 30 b. 9	List positive multiples and locate the first shared future point.
2	20 seconds	List positive multiples and locate the first shared future point.
3	B — When will two buses next arrive together?	Ask the learner to show why B — When will two buses next arrive together? is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses GCF for recurrence or reports today as the next meeting..

Response: List positive multiples and locate the first shared future point.

Also check: Using the product as the LCM (9 × 12 = 108 instead of 36).

Also check: Choosing a later shared multiple instead of the first one on both lists.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Two events recur every 4 and 10 days, both today. When next together?

Teacher solution: 20 days.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: LCM 24; next shared visit in 24 days. Today is day zero and is excluded from next.

Misconception response anchor: Uses GCF for recurrence or reports today as the next meeting.. Use list positive multiples and locate the first shared future point.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.
