Lesson 6.8 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Using Properties to Rewrite Expressions · I can use the distributive property and like terms to rewrite an expression in simplest form.

S2: Expanding and Factoring Expressions · I can expand an expression and factor one using the greatest common factor.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Using Properties to Rewrite Expressions

I can use the distributive property and like terms to rewrite an expression in simplest form. · 6.EE.A.3

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 5x + 15 b. 8n + 8	Label both pieces inside the rectangle and multiply each by the outside factor.
2	7b + 8	Label both pieces inside the rectangle and multiply each by the outside factor.
3	B — Associative	Ask the learner to show why B — Associative is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Distributes to only the variable term..

Response: Label both pieces inside the rectangle and multiply each by the outside factor.

Also check: Multiplying only the first term inside the parentheses (4(q + 5) written as 4q + 5).

Also check: Combining unlike terms (7m + 8 written as 15m).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Expand and simplify 4(n+2)+3n.

Teacher solution: 7n+8.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 3x+12; then 5x+12. Distribution applies 3 to both terms; regroup like terms using properties of addition.

Misconception response anchor: Distributes to only the variable term.. Use label both pieces inside the rectangle and multiply each by the outside factor.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.

Session 2 · Expanding and Factoring Expressions

I can expand an expression and factor one using the greatest common factor. · 6.EE.A.3

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 7a + 35 b. 6(2b + 3)	Find the GCF of the coefficients, divide each term, and expand the result.
2	10(2m + 3)	Find the GCF of the coefficients, divide each term, and expand the result.
3	B — 9y + 18	Ask the learner to show why B — 9y + 18 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Accepts any common factor as the greatest or fails to divide every term..

Response: Find the GCF of the coefficients, divide each term, and expand the result.

Also check: Factoring out a common factor that is not the greatest (16y + 40 = 2(8y + 20)).

Also check: Multiplying only the first term when expanding (5(w + 8) = 5w + 8).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Factor 20a+30 with the GCF and check.

Teacher solution: 10(2a+3); expand to 20a+30.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: GCF 6 gives 6(2x+3); expanding recovers 12x+18. The other expression is equivalent but uses common factor 2 instead of greatest factor 6.

Misconception response anchor: Accepts any common factor as the greatest or fails to divide every term.. Use find the GCF of the coefficients, divide each term, and expand the result.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: My model or expression represents ___ because ___. The structure shows ___, so the result is ___.
