Lesson 7.1 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Integers and Opposites · I can write an integer for a real situation and name its opposite.

S2: Integers in Real Situations · I can interpret integers in real situations and find the opposite of an opposite.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Integers and Opposites

I can write an integer for a real situation and name its opposite. · 6.NS.C.5

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. −20 b. 11	State what zero represents before interpreting a signed value.
2	Points at −5 and 5; 5 units each	State what zero represents before interpreting a signed value.
3	A — −4 and 4	Ask the learner to show why A — −4 and 4 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Confuses zero change with zero quantity..

Response: State what zero represents before interpreting a signed value.

Also check: Dropping the negative sign for “below” or “debt” (writing 24 for 24 m below sea level).

Also check: Thinking a negative number is its own opposite (opposite of −18 is −18).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A location is 6 m below sea level. Name its signed elevation and opposite elevation.

Teacher solution: −6 m and +6 m; sea level is the zero reference.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Changes +8 and −8 L are opposites. Their net change is zero, but the tank need not contain zero liters; zero means no change from the reference level.

Misconception response anchor: Confuses zero change with zero quantity.. Use state what zero represents before interpreting a signed value.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.

Session 2 · Integers in Real Situations

I can interpret integers in real situations and find the opposite of an opposite. · 6.NS.C.5

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. −20 b. 13	Reflect the point across zero once and then again.
2	−7; opposite 7, which means 7 degrees above zero	Reflect the point across zero once and then again.
3	B — 9	Ask the learner to show why B — 9 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Treats taking the opposite twice as making the value positive in every case..

Response: Reflect the point across zero once and then again.

Also check: Believing two opposites always make a positive (opposite of the opposite of −19 written as 19).

Also check: Using a positive number for a loss, drop, or withdrawal.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Find the opposite of −9 and then the opposite of that result.

Teacher solution: 9, then −9.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: A balance is a current position; a change reduces the balance by 12. −(−12)=12; its opposite is −12. Context defines the reference and role.

Misconception response anchor: Treats taking the opposite twice as making the value positive in every case.. Use reflect the point across zero once and then again.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.
