Lesson 7.3 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Absolute Value as Distance · I can use absolute value to describe how far a number is from zero.

S2: Absolute Value as Total Distance · I can use absolute value to find the total distance between a negative and a positive reading.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Absolute Value as Distance

I can use absolute value to describe how far a number is from zero. · 6.NS.C.7c

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 11 b. 7.25	Separate a question about location from a question about distance.
2	the diver, because |−12| = 12 and 12 > 9	Separate a question about location from a question about distance.
3	A — −15	Ask the learner to show why A — −15 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses absolute value to decide ordinary numerical order..

Response: Separate a question about location from a question about distance.

Also check: Writing a negative absolute value (|−5.2| = −5.2).

Also check: Thinking a negative number is closer to 0 because it is “smaller.”

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Compare −7 and 3 by numerical value and by distance from zero.

Teacher solution: 3 is greater; −7 is farther because 7>3.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Opposite 9 and absolute value 9. Four is greater than −9, but −9 is farther from zero because its distance is 9 versus 4.

Misconception response anchor: Uses absolute value to decide ordinary numerical order.. Use separate a question about location from a question about distance.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.

Session 2 · Absolute Value as Total Distance

I can use absolute value to find the total distance between a negative and a positive reading. · 6.NS.C.7c

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 17 b. 11	Trace the actual segment; check whether zero lies between the endpoints.
2	5 + 13 = 18 degrees	Trace the actual segment; check whether zero lies between the endpoints.
3	B — 7	Ask the learner to show why B — 7 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Always adds absolute values for any pair of numbers..

Response: Trace the actual segment; check whether zero lies between the endpoints.

Also check: Subtracting absolute values when 0 is between the readings (−9 to 24 written as 15).

Also check: Adding absolute values when both readings are on the same side of 0 (−18 to −41 written as 59).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Find distances from −8 to 3 and from −8 to −5.

Teacher solution: 11 and 3 units.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Across zero: 6+4=10. Same side: 6−2=4. The second segment does not include the trips from both endpoints to zero.

Misconception response anchor: Always adds absolute values for any pair of numbers.. Use trace the actual segment; check whether zero lies between the endpoints.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.
