Lesson 7.5 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Plotting Points on the Coordinate Plane · I can plot a point with rational coordinates and name the quadrant it lies in.

S2: Reflecting Points Across Axes · I can reflect a point across the x-axis or the y-axis and name the new coordinates.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Plotting Points on the Coordinate Plane

I can plot a point with rational coordinates and name the quadrant it lies in. · 6.NS.C.6c

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. Quadrant III b. Quadrant I	Check whether either coordinate is zero before using the signs to name a quadrant.
2	(−5, 2)	Check whether either coordinate is zero before using the signs to name a quadrant.
3	B — (3, −4)	Ask the learner to show why B — (3, −4) is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Assigns an axis point to a quadrant..

Response: Check whether either coordinate is zero before using the signs to name a quadrant.

Also check: Moving along the y-axis first (plotting (−5, 4) as down 5, right 4).

Also check: Switching x and y, thinking (−2, 6) and (6, −2) are the same point.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Classify (4,−1), (3,0), and (0,2).

Teacher solution: Quadrant IV, x-axis, y-axis.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: (−2,3) is Quadrant II; (0,−3) is on the y-axis; origin on both axes. Quadrants are the open regions between axes.

Misconception response anchor: Assigns an axis point to a quadrant.. Use check whether either coordinate is zero before using the signs to name a quadrant.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.

Session 2 · Reflecting Points Across Axes

I can reflect a point across the x-axis or the y-axis and name the new coordinates. · 6.NS.C.6b

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. (4, −9) b. (8, −3)	Write the starting point for each step and keep the coordinate parallel to the mirror axis unchanged.
2	the x-axis; 12 units apart	Write the starting point for each step and keep the coordinate parallel to the mirror axis unchanged.
3	B — (−3, −7)	Ask the learner to show why B — (−3, −7) is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Applies an independent reflection to the wrong starting image or changes both coordinates in one reflection..

Response: Write the starting point for each step and keep the coordinate parallel to the mirror axis unchanged.

Also check: Changing both signs for a single reflection ((−1, 8) written as (1, −8)).

Also check: Changing the wrong coordinate (across the y-axis, changing y).

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Reflect (−5,2) across x then y; name the final image and explain both changes.

Teacher solution: (−5,−2), then (5,−2).

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Separate images: (3,2) and (−3,−2). Sequential final image: (−3,2). Point (0,4) stays fixed under reflection across the y-axis.

Misconception response anchor: Applies an independent reflection to the wrong starting image or changes both coordinates in one reflection.. Use write the starting point for each step and keep the coordinate parallel to the mirror axis unchanged.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.
