Lesson 7.6 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Distance Between Points on a Grid · I can find the distance between two points that share a coordinate.

S2: Comparing Distances on the Plane · I can decide whether to add or subtract to find a distance, then compare two distances.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Distance Between Points on a Grid

I can find the distance between two points that share a coordinate. · 6.NS.C.8

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 3 + 6 = 9 units b. 8 − 2 = 6 units	Mark the segment and use only the coordinate that changes; distance is nonnegative.
2	B = (−2, −2)	Mark the segment and use only the coordinate that changes; distance is nonnegative.
3	B — horizontal line	Ask the learner to show why B — horizontal line is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Uses the unchanged coordinate or returns a signed distance..

Response: Mark the segment and use only the coordinate that changes; distance is nonnegative.

Also check: Subtracting the absolute values when the points are on opposite sides of an axis ((2, −9) to (2, 6) as 3 instead of 15).

Also check: Using the coordinate that stays the same instead of the one that changes.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Find distance from (2,−5) to (2,3).

Teacher solution: 8 units; shared x means vertical distance.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Shared y means horizontal segments. Distances 7 and 2 units; the first crosses the y-axis, the second stays on one side.

Misconception response anchor: Uses the unchanged coordinate or returns a signed distance.. Use mark the segment and use only the coordinate that changes; distance is nonnegative.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.

Session 2 · Comparing Distances on the Plane

I can decide whether to add or subtract to find a distance, then compare two distances. · 6.NS.C.8

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. 5 + 4 = 9 units b. 9 − 1 = 8 units	Compute each grid distance, then multiply by the same scale before comparing.
2	Lee: 6 + 3 = 9 units. Mia: 4 + 7 = 11 units. Mia, by 2 units.	Compute each grid distance, then multiply by the same scale before comparing.
3	A — 5 units	Ask the learner to show why A — 5 units is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Compares grid units with meters without conversion..

Response: Compute each grid distance, then multiply by the same scale before comparing.

Also check: Subtracting absolute values for points on opposite sides of an axis ((−8, 3) to (4, 3) as 4 instead of 12).

Also check: Comparing grid units for one trip with scaled meters for the other trip.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

A vertical segment has endpoints y=−2 and y=5; scale 4 m per unit. Find length.

Teacher solution: 7 units × 4 = 28 m.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: AB 6 units=18 m; AC 8 units=24 m. AC is 6 m longer.

Misconception response anchor: Compares grid units with meters without conversion.. Use compute each grid distance, then multiply by the same scale before comparing.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The location or direction is ___, but the distance is ___. I know this because ___.
