Lesson 8.1 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Equations and Solutions · I can check whether a value is a solution of an equation by substituting it.

S2: Writing Equations · I can write an equation for a situation and test a proposed answer.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Equations and Solutions

I can check whether a value is a solution of an equation by substituting it. · 6.EE.B.5

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. T (19 = 19) b. F (18 ≠ 21)	Evaluate both sides after substitution and explicitly state true or false.
2	h = 8, because 8 − 5 = 3	Evaluate both sides after substitution and explicitly state true or false.
3	A — value	Ask the learner to show why A — value is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Accepts a proposed value without testing the original equality..

Response: Evaluate both sides after substitution and explicitly state true or false.

Also check: Reporting the value of each side (42) as the solution instead of the value of the variable (12).

Also check: Reading 4p as 4 + p instead of 4 × p.

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Test n=4 and n=5 in 3n=15.

Teacher solution: 12≠15; 15=15; n=5 is the solution.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: 6−3=3, not 4; 7−3=4 is true, so x=7 is a solution.

Misconception response anchor: Accepts a proposed value without testing the original equality.. Use evaluate both sides after substitution and explicitly state true or false.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The value or set ___ makes the statement true because ___. I check it by ___.

Session 2 · Writing Equations

I can write an equation for a situation and test a proposed answer. · 6.EE.B.6

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. n + 14 = 31 b. 4n = 36	Label starting, removed, and remaining quantities before forming the relationship.
2	50 − b = 32; b = 18 books	Label starting, removed, and remaining quantities before forming the relationship.
3	B — 8w = 56	Ask the learner to show why B — 8w = 56 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Models the unknown as the remaining amount instead of the removed amount..

Response: Label starting, removed, and remaining quantities before forming the relationship.

Also check: Writing the parts in the wrong order for a take-away story (72 + m = 25 or 18 − b = 60).

Also check: Writing 9 − n for “a number decreased by 9.”

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Thirty items begin a collection; 12 remain after some are used. Define u and write/check an equation.

Teacher solution: 30−u=12 or u+12=30; u=18.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: r is removed counters; 28−r=9; r=19. Check 28−19=9. An equivalent equation r+9=28 is valid.

Misconception response anchor: Models the unknown as the remaining amount instead of the removed amount.. Use label starting, removed, and remaining quantities before forming the relationship.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The value or set ___ makes the statement true because ___. I check it by ___.
