Lesson 8.5 Teaching Support Guide

Teach-tomorrow route

Print: current Guided Notes and Practice A for the class; Exit Tickets; optional Language Support and supported homework. Keep this guide and answer keys teacher-facing. Use the full-size model pages in the updated notes.

Phase	Planned minutes	Teaching move
Retrieve	5	Warm-Up items 1–4; note the missing prerequisite before launch.
Launch	7	Name the session target and invite a prediction from the conceptual task.
Model	10	Link a visual model to the worked example; rehearse the mathematical explanation.
Practice	18	Core: A #1, #2, #4, #6 and the error task. Choose remaining items from evidence.
Check	5	Exit Ticket; use the diagnostic page before assigning reteaching.

This is a planned 45-minute route, not a measured classroom duration. For a shorter lesson, keep the model and exit; reduce repeated practice. Form B is parallel practice or reassessment only when its items are unseen.

S1: Graphing Inequalities · I can graph an inequality on a number line using an open or a closed dot.

S2: Testing Solutions to Inequalities · I can test values against an inequality and graph the solution set.

Spaced retrieval: revisit one item after 2 lessons and after approximately 1 week. Mix it with the next unit’s prerequisite check; do not announce the operation before students choose a method.

Session 1 · Graphing Inequalities

I can graph an inequality on a number line using an open or a closed dot. · 6.EE.B.8

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. open dot at 3, arrow right b. closed dot at −2, arrow left	Substitute a value on each side of the boundary and shade the true side.
2	d ≤ 40; closed dot at 40, arrow left	Substitute a value on each side of the boundary and shade the true side.
3	C — x < 5	Ask the learner to show why C — x < 5 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Chooses arrow direction from the symbol's appearance without checking a value..

Response: Substitute a value on each side of the boundary and shade the true side.

Also check: Choosing the dot from the sign of the number (negative means open) instead of from the symbol.

Also check: Pointing the arrow the wrong way for ≥ or ≤ (the arrow points toward the numbers that make the statement true).

If calculation alone is wrong, use Session 1 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 1 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

Graph y<3 and justify the dot and direction using 2 and 3.

Teacher solution: Open circle at 3, ray left; 2 satisfies, 3 does not.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: Closed circle at −2, ray right. −3 fails; −2 and 0 satisfy. Closed circle includes the boundary.

Misconception response anchor: Chooses arrow direction from the symbol’s appearance without checking a value.. Use substitute a value on each side of the boundary and shade the true side.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The value or set ___ makes the statement true because ___. I check it by ___.

Session 2 · Testing Solutions to Inequalities

I can test values against an inequality and graph the solution set. · 6.EE.B.8

Observe and respond

Exit item	Expected evidence	Next prompt/model
1	a. no b. yes	Use the candidates as checks, then describe all values under the graph.
2	v < 85; 85 < 85 is false (not a solution); 60 < 85 is true (solution)	Use the candidates as checks, then describe all values under the graph.
3	B — −3	Ask the learner to show why B — −3 is correct and reject a specific distractor using a model.

Distinguish the error

Conceptual signal: Reports only the listed candidates as the complete solution set..

Response: Use the candidates as checks, then describe all values under the graph.

Also check: Thinking the boundary is always a solution (it is only for ≤ and ≥).

Also check: Reading “more than 45” as n ≥ 45.

If calculation alone is wrong, use Session 2 Prerequisite Practice A for the matching skill, then return to the model. If the interpretation is wrong, label the quantities before reteaching the operation. Independent re-entry requires a correct setup and a connected explanation.

Session 2 · Fresh check and scoring

Reserve this check until after revision; it is distinct from the exit ticket. Do not show this teacher page to learners beforehand.

For $n \geq -0.5$, test $-1, -0.5, 0.25$. Explain the boundary.

Teacher solution: -1 fails; -0.5 and 0.25 satisfy; boundary included.

Score the evidence

Score	Evidence	Next action
3	Valid representation, correct result/units, connected explanation.	Continue; fade a support next time.
2	Correct setup and meaning with a calculation/notation slip, or an incomplete explanation.	Brief targeted feedback, then another unseen check.
1	Some relevant facts but a model or interpretation error.	Use the named model and the corresponding prerequisite page.
0	No interpretable evidence yet.	Oral/diagram response to separate access needs from mathematics.

Complete response anchor: -1 satisfies; 1.5 and 2 fail. Example 1.25 also satisfies. Every real number less than 1.5 belongs, infinitely many values.

Misconception response anchor: Reports only the listed candidates as the complete solution set.. Use use the candidates as checks, then describe all values under the graph.

Language access: point/draw and label → oral rehearsal → relationship sentence → independent explanation. Offer the support needed for this task and fade it based on evidence. Suggested frame: The value or set ___ makes the statement true because ___. I check it by ___.
