

Fraction Division Story Court

Unit 2: Fraction Detective Agency • Lesson 2-5 • EduWonderLab

UNIT 2 • LESSON 2-5 • TEACHER NOTES

Standard 6.NS.1

FORMAT Debate / justify task cards

TIME 25–35 min

GROUPING Teams of 3–4

TOPIC Fraction Division Problem Solving

STANDARD 6.NS.1

PREP LEVEL Light — print story cards and evidence organizer

Learning goal *I can decide when a situation needs fraction division, write the equation, and defend my answer.*

Teacher setup

- Print one story set and organizer per team. Each card is a real-world situation.
- Teams decide if the problem needs division, write the equation, and solve.
- Teams “defend” their answer to the class or another team using the sentence frame.

Materials

Story problem cards, Evidence organizer, Judge’s checklist, Pencil.

Differentiation & language support

- Evidence organizer: situation → operation → equation → answer (SPED).
- Sentence stem: “This is division because we are finding ____.”
- ESOL: underline the question word in each story before solving.

Key vocabulary (English / Español):

Term	Español	What it means
equation	ecuación	a number sentence with an equal sign
justify	justificar	to give reasons that prove your answer

Quick teacher check: *Listen for a team defending Card 2 (sharing) vs Card 1 (measuring out).*

Fraction Division Story Court

Unit 2: Fraction Detective Agency · Lesson 2-5 · EduWonderLab

Name: _____

Date: _____

Class: _____

Your goal: *I can decide when a situation needs fraction division, write the equation, and defend my answer.*

What you need

Story problem cards, Evidence organizer.

How to play

1. Read a story card with your team.
2. Decide if it needs division. Write the equation.
3. Solve and label your answer with units.
4. Defend your answer using evidence from the story.

Story Cards

Decide if each story needs division. Write the equation, solve, and be ready to defend it.

1. A 6-ft ribbon is cut into $\frac{3}{4}$ -ft pieces. How many pieces?	2. $\frac{3}{4}$ lb of trail mix is split equally among 3 friends. How much each?
3. A recipe needs $\frac{2}{3}$ cup per batch. You have 4 cups. How many batches?	4. $2\frac{1}{2}$ yards of fabric is cut into $\frac{1}{2}$ -yd pieces. How many pieces?
5. $\frac{5}{6}$ gallon of juice fills $\frac{1}{6}$ -gallon cups. How many cups?	6. A $4\frac{1}{2}$ -ft board is cut into $\frac{3}{4}$ -ft shelves. How many shelves?
7. $\frac{7}{8}$ cup of sugar is shared into 7 mini-jars. How much each?	8. 9 cups of flour; each loaf uses $1\frac{1}{2}$ cups. How many loaves?

Evidence organizer (operation, equation, answer):

Explain your thinking

Choose one card. Explain how you knew it was division and not multiplication.

Sentence frame: *This is division because we are finding how many ___ fit in ___ (or the size of each ___).*

★ **Challenge:** *Cards 2 and 7 share an amount equally. Cards 1 and 4 measure out pieces. Sort all eight cards by meaning.*

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 2 • LESSON 2-5 • Fraction Division Story Court

Standard 6.NS.1

Answers

1. A 6-ft ribbon is cut into $\frac{3}{4}$-ft pieces. How many pieces? Answer: $6 \div \frac{3}{4} = 8$ pieces	2. $\frac{3}{4}$ lb of trail mix is split equally among 3 friends. How much each? Answer: $\frac{3}{4} \div 3 = \frac{1}{4}$ lb each
3. A recipe needs $\frac{2}{3}$ cup per batch. You have 4 cups. How many batches? Answer: $4 \div \frac{2}{3} = 6$ batches	4. $2\frac{1}{2}$ yards of fabric is cut into $\frac{1}{2}$-yd pieces. How many pieces? Answer: $2\frac{1}{2} \div \frac{1}{2} = 5$ pieces
5. $\frac{5}{6}$ gallon of juice fills $\frac{1}{6}$-gallon cups. How many cups? Answer: $\frac{5}{6} \div \frac{1}{6} = 5$ cups	6. A $4\frac{1}{2}$-ft board is cut into $\frac{3}{4}$-ft shelves. How many shelves? Answer: $4\frac{1}{2} \div \frac{3}{4} = 6$ shelves
7. $\frac{7}{8}$ cup of sugar is shared into 7 mini-jars. How much each? Answer: $\frac{7}{8} \div 7 = \frac{1}{8}$ cup each	8. 9 cups of flour; each loaf uses $1\frac{1}{2}$ cups. How many loaves? Answer: $9 \div 1\frac{1}{2} = 6$ loaves

Teaching notes & look-fors

- “Sharing” cards: 2, 7 (size of each part). “Measuring out” cards: 1, 3, 4, 5, 6, 8 (how many fit).
- Every answer should carry a unit (pieces, cups, batches...).
