

Model-It Choice Board

Unit 7: Equation Detective Agency · Lesson 7-7 · EduWonderLab

UNIT 7 · LESSON 7-7 · TEACHER NOTES

Standard 6.EE.7

FORMAT Choice board with mixed problems

TIME 25–35 min

GROUPING Pairs or solo

TOPIC Equations and Inequalities Problem Solving

STANDARD 6.EE.7

PREP LEVEL Light — print choice board and problem cards

Learning goal *I can model a situation with an equation or inequality, solve or graph, and interpret the answer.*

Teacher setup

- Print one choice board and card set per pair.
- Students decide whether each problem needs an equation or an inequality.
- They model, solve or graph, and write a sentence interpreting the answer.

Materials

Choice board, Mixed problem cards, Model template, Pencil.

Differentiation & language support

- Warm-up sort: “which model fits — equation or inequality?” (SPED)
- Sentence stem: “This needs an ___ because ___.”
- ESOL: highlight comparison words (at least, exactly, more than).

Key vocabulary (English / Español):

Term	Español	What it means
model	modelo	an equation or inequality for a situation
interpret	interpretar	to explain what the answer means

Quick teacher check: *Check that Cards 3, 4, 6, 8 are modeled as inequalities, not equations.*

Model-It Choice Board

Unit 7: Equation Detective Agency · Lesson 7-7 · EduWonderLab

Name:

Date:

Class:

Your goal: *I can model a situation with an equation or inequality, solve or graph, and interpret the answer.*

What you need

Choice board, Mixed problem cards.

How to play

1. Pick a problem from the choice board.
2. Decide: equation (one answer) or inequality (a range)?
3. Model it, then solve or graph.
4. Write one sentence interpreting your answer.

Problem Cards

Decide if each problem needs an equation or an inequality, then solve or graph and interpret.

1. A number increased by 7 equals 22. Find the number.	2. Tickets cost \$6 each. You spent \$42. How many tickets?
3. You must score at least 90 to pass. Write an inequality.	4. A box holds at most 12 cans. Write an inequality.
5. Three times a number is 24. Find it.	6. You have \$20 and want to spend less than that. Write an inequality.
7. A number minus 5 equals 11. Find it.	8. A field trip needs more than 25 students. Write an inequality.

Record your work (model, solve/graph, interpret):

Explain your thinking

Explain how you decide whether a problem needs an equation or an inequality.

Sentence frame: *This needs an ___ because the situation describes ___.*

★ **Challenge:** *Take an equation card and rewrite it as an inequality situation. (For Card 5: “at least 24.”)*

ANSWER KEY

Teacher copy — please do not distribute to students.

UNIT 7 • LESSON 7-7 • Model-It Choice Board

Standard 6.EE.7

Answers

1. A number increased by 7 equals 22. Find the number. Answer: $x + 7 = 22 \rightarrow x = 15$	2. Tickets cost \$6 each. You spent \$42. How many tickets? Answer: $6x = 42 \rightarrow x = 7$ tickets
3. You must score at least 90 to pass. Write an inequality. Answer: $s \geq 90$	4. A box holds at most 12 cans. Write an inequality. Answer: $c \leq 12$
5. Three times a number is 24. Find it. Answer: $3x = 24 \rightarrow x = 8$	6. You have \$20 and want to spend less than that. Write an inequality. Answer: $m < 20$
7. A number minus 5 equals 11. Find it. Answer: $x - 5 = 11 \rightarrow x = 16$	8. A field trip needs more than 25 students. Write an inequality. Answer: $n > 25$

Teaching notes & look-fors

- Equations (one answer): 1, 2, 5, 7. Inequalities (a range): 3, 4, 6, 8.
- Comparison words like “at least” or “more than” signal an inequality.
