# Math is In My World

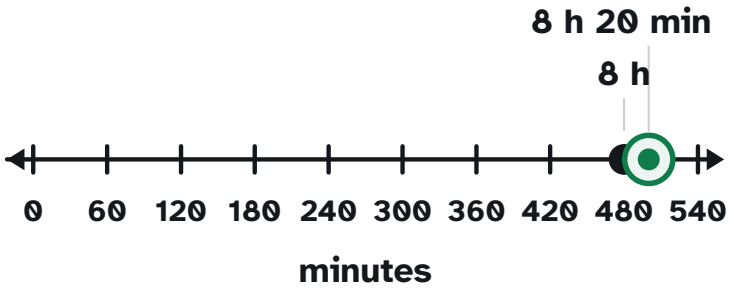
Pick a tool, then change minutes into hours and minutes by dividing by 60.

**Name** _____ **Date** _____

## Tonight's spark

A route map shows a night bus. It leaves at midnight and rides for 500 minutes. What time does it arrive?

**Make a guess first: does it arrive before 8:00 a.m., or after?**



**Our class model: the number line of 60-minute jumps**

## Try it

Work it out on paper. Write one answer on each line.

1. **How many minutes are in 1 hour?**

   **A.** 60 **B.** 100 **C.** 30 **D.** 12

   **My answer** _____

2. **How many minutes are in 2 hours?**

   **A.** 200 **B.** 22 **C.** 120

   **My answer** _____

3. **One ride takes 4.5 minutes. How many minutes do 10 rides take?**

   **A.** 0.45 **B.** 45 **C.** 14.5 **D.** 450

   **My answer** _____

**4** **A number line is marked every 60 minutes. How many jumps reach 240 minutes?**

**A.** 24 **B.** 6 **C.** 3 **D.** 4

**My answer** _____

**5** **What is 200 minutes in hours and minutes?**

**A.** 3 hours 20 minutes **B.** 2 hours 20 minutes **C.** 3 hours 2 minutes **D.** 3.2 hours

**My answer** _____

**6** **A party starts at midnight. What time is it 330 minutes later?**

**A.** 3:30 a.m. **B.** 5:30 a.m. **C.** 6:30 a.m.

**My answer** _____

### Talk about it

How many whole hours fit, and how many minutes are left over?

### Home mission

A different situation: use a phone or clock. Start at midnight and ask what time it is 150 minutes later. Let your student count by 60s on their fingers, then say the leftover minutes.

### If we get stuck, ask

- Which tool would show this best — a bar, a number line, or a table?
- How many minutes are in one hour? So what do we divide by?
- What does the leftover number mean in this problem?

**Do it on a screen**

Scan or type the link. Same lesson, with hints.

**eduwonderlab.com/lessons/1-3-part2/homework.html**

**How did it feel? (optional)**

Tricky Getting there Got it
