# Math is Ours

Explain how you solve a problem and what to try when you get stuck.

**Name** _____ **Date** _____

## Tonight's spark

Two bike racks sit outside the rec center. One rack holds 8 bikes, and each bike has 2 wheels. The other rack has 6 times as many wheels. How many wheels are on the other rack?

**Make a guess first: more than 50 wheels, or fewer?**

## Try it

Work it out on paper. Write one answer on each line.

**1** **What is the first step in solving a problem?**

**A.** Multiply the numbers **B.** Check your answer

**C.** Make sense of what the problem is asking **D.** Write the final answer

**My answer** _____

**2** **A rack holds 6 bikes. Each bike has 2 wheels. How many wheels are on the rack?**

**A.** 12 **B.** 8 **C.** 3 **D.** 26

**My answer** _____

**3** **Which is a good way to get unstuck?**

**A.** Stop and say 'I can't' **B.** Copy someone's answer without understanding it

**C.** Hide your work **D.** Try a smaller number or draw a picture

**My answer** _____

**4** **A shelf holds 9 cans. A pantry has 4 shelves just like it. How many cans are in the pantry?**

**A.** 13 **B.** 36 **C.** 94 **D.** 5

**My answer** _____

**5** **One rack has 14 wheels. Another rack has 5 times as many wheels. How many wheels does the other rack have?**

**A.** 19 **B.** 9 **C.** 70 **D.** 145

**My answer** _____

**6** **You solve 15 × 4 = 60. Which check shows the answer makes sense?**

**A.** 60 is 4 groups of 15, so it should be bigger than 15 **B.** 60 is smaller than 15

**C.** The answer cannot be checked **D.** Any answer is fine if it is a number

**My answer** _____

### Talk about it

What did you do first to make sense of the problem, and what could you try if you got stuck?

### Home mission

Set out 8 forks to be bikes. Give each fork 2 coins for wheels. Ask your student to say what the problem asks, then show the 16 wheels. Last, ask what your student could try next if the problem got hard.

### If we get stuck, ask

- What is the problem asking, in your own words?
- What could you draw to see it?
- What is one thing you could try next?

**Do it on a screen**

Scan or type the link. Same lesson, with hints.
