Math is Ours — Homework

Lesson 1-6 • Standard MPP.3

Name: _____ **Period:** _____ **Date:** _____

Today's Goals

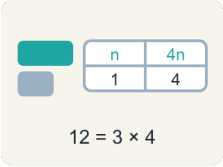

Content: I can describe my problem-solving process, name strategies for getting unstuck, and identify the behaviors that make our class a community of math thinkers.

Language: I can talk about problem solving using the phrases make sense of, get stuck, try a strategy, and work together.

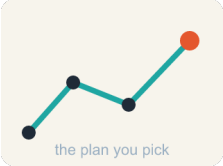

Key Words

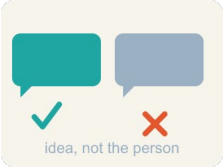

make sense of a problem (comprender un problema) — To figure out what a problem is asking — what you know, and what you don't know yet.

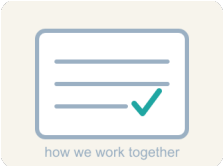

representation (representación) — A way of showing a problem — a drawing, table, equation, or model — that helps you see it.

strategy (estrategia) — A plan of attack for a problem — and something you can switch when you get stuck.

critique (criticar constructivamente) — To examine an idea and say what is convincing or not — about the idea, never about the person.

community agreement (acuerdo comunitario) — A rule the whole class agrees to so that everyone can learn together.

Practice

Show your work. Use the blank space under each problem.

1. A bicycle rack holds 8 bikes, and each bike has 2 wheels. How many wheels are on the rack?

A. 4
B. 10
C. 16
D. 82

2. Another bicycle rack has 6 times as many wheels as the rack with 16 wheels. About how many wheels does it have?

A. About 22
B. About 66
C. About 96
D. About 616

3. You are solving a problem and realize your strategy is not making progress. What does the problem-solving process say to do?

A. Keep using the same strategy no matter what
B. Notice your progress has stalled and shift to a different strategy
C. Erase everything and decide the problem is impossible
D. Copy a classmate's paper

4. The first rack has 16 wheels and the other rack has 6 times as many. How many BIKES does the bigger rack hold, if every bike has 2 wheels?

A. 24
B. 48
C. 96
D. 192

5. Describe your problem-solving process in order, from reading the problem to checking your answer. Use at least three steps from this lesson.

6. What part of problem solving is easy for you? What part is challenging?

7. You are working on your own and get stuck. Which move follows BOTH parts of our working-alone agreements?

A. Immediately call across the room to a friend
B. Sit silently for the rest of class without seeking help
C. Take a classmate's paper to see their work
D. Try a get-unstuck strategy first, then quietly ask for help without interrupting classmates unnecessarily

8. What skills and knowledge do you bring to a group that help the group be successful?

9. Use the bicycle rack problem to complete the table.

Question	Thinking	Answer
Wheels on a rack of 8 bikes	8 bikes × 2 wheels	
Wheels on the bigger rack (6 times as many)	16 × 6	
Bikes on the bigger rack	96 wheels ÷ 2
