Math is Playful

Play with a puzzle and use patterns to think logically about its solutions.

Name _____ **Date** _____

Tonight's spark

A Tower of Hanoi puzzle has 3 discs stacked on one spot. Move one disc at a time. A big disc never sits on a small one. How few moves can move the whole stack?

Guess first: fewer than 5 moves, or more?

Try it

Finish each sentence in your own words.

1. **A puzzle has rules, a goal, and ___.**

   My words _____

2. **The pattern in the moves goes ___, ___, ___.**

   My words _____

3. **My pattern rule is: ___ it and ___.**

   My words _____

4. **I predict ___ because the pattern ___.**

   My words _____

5. **I organize my results in a ___ so I can see ___.**

   My words _____

Talk about it

What is the smallest tower you could solve first?

Home mission

Use three coins of different sizes and three spots on the table. Move one coin at a time, and never put a big coin on a small one. Start with one coin, then two. Ask your student to predict before moving three.

If we get stuck, ask

- What happened with just two discs?
- How does each answer relate to the one before it?
- Can you predict before you play?

Do it on a screen

Scan or type the link. Same lesson, with hints.
